NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXIX. BISMARCK, N. D., JANUARY, 1920. No. 1.

GENERAL SUMMARY.

Taken as a whole, the weather throughout the month was unfavorable from the standpoint of outdoor work, rail and wagon traffic, and for livestock. During the twenty-nine years since the Climatological Service was established in North Dakota, the mean temperature for January was lower but nine times, and the average precipitation was exceeded but three times during that period. Owing to the scarcity of feed in the central and western parts of the State, livestock suffered to a considerable extent, and some losses resulted.

TEMPERATURE.

The mean temperature for the State was 2.7°, or 2.2° below the normal, and 16.0° lower than the mean for January, 1919. The highest mean reported was 16.8° at Hettinger, Adams County; the lowest was −7.2° at Pembina, Pembina County. The highest temperature reported was 49° at Hettintinger on the 30th and 31st; the lowest was −44° at Berthold Agency, McLean County, on the 24th. The greatest daily range of temperature was 55° at Bottineau, Bottineau County, on the 27th. The greatest monthly range was 87° at Berthold Agency, McLean County; the least was 58° at Mayville, Traill County. Naturally the temperature over the southern portion of the State averaged 15° higher than over the northern portion.

PRECIPITATION.

The average precipitation for the State was 0.93 inch, or 0.39 inch above the normal, and 0.76 inch greater than the average for January, 1919. The greatest monthly amount reported was 2.97 inches at Westhope, Bottineau County; there was none at Hettinger, Adams County. The greatest amount recorded in any twenty-four consecutive hours was 1.15 inches at Westhope, Bottineau County, on the 26th. The average number of days with 0.01 inch or more of precipitation was 5. The average snowfall for the State was 10.0 inches.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for January, 1920.

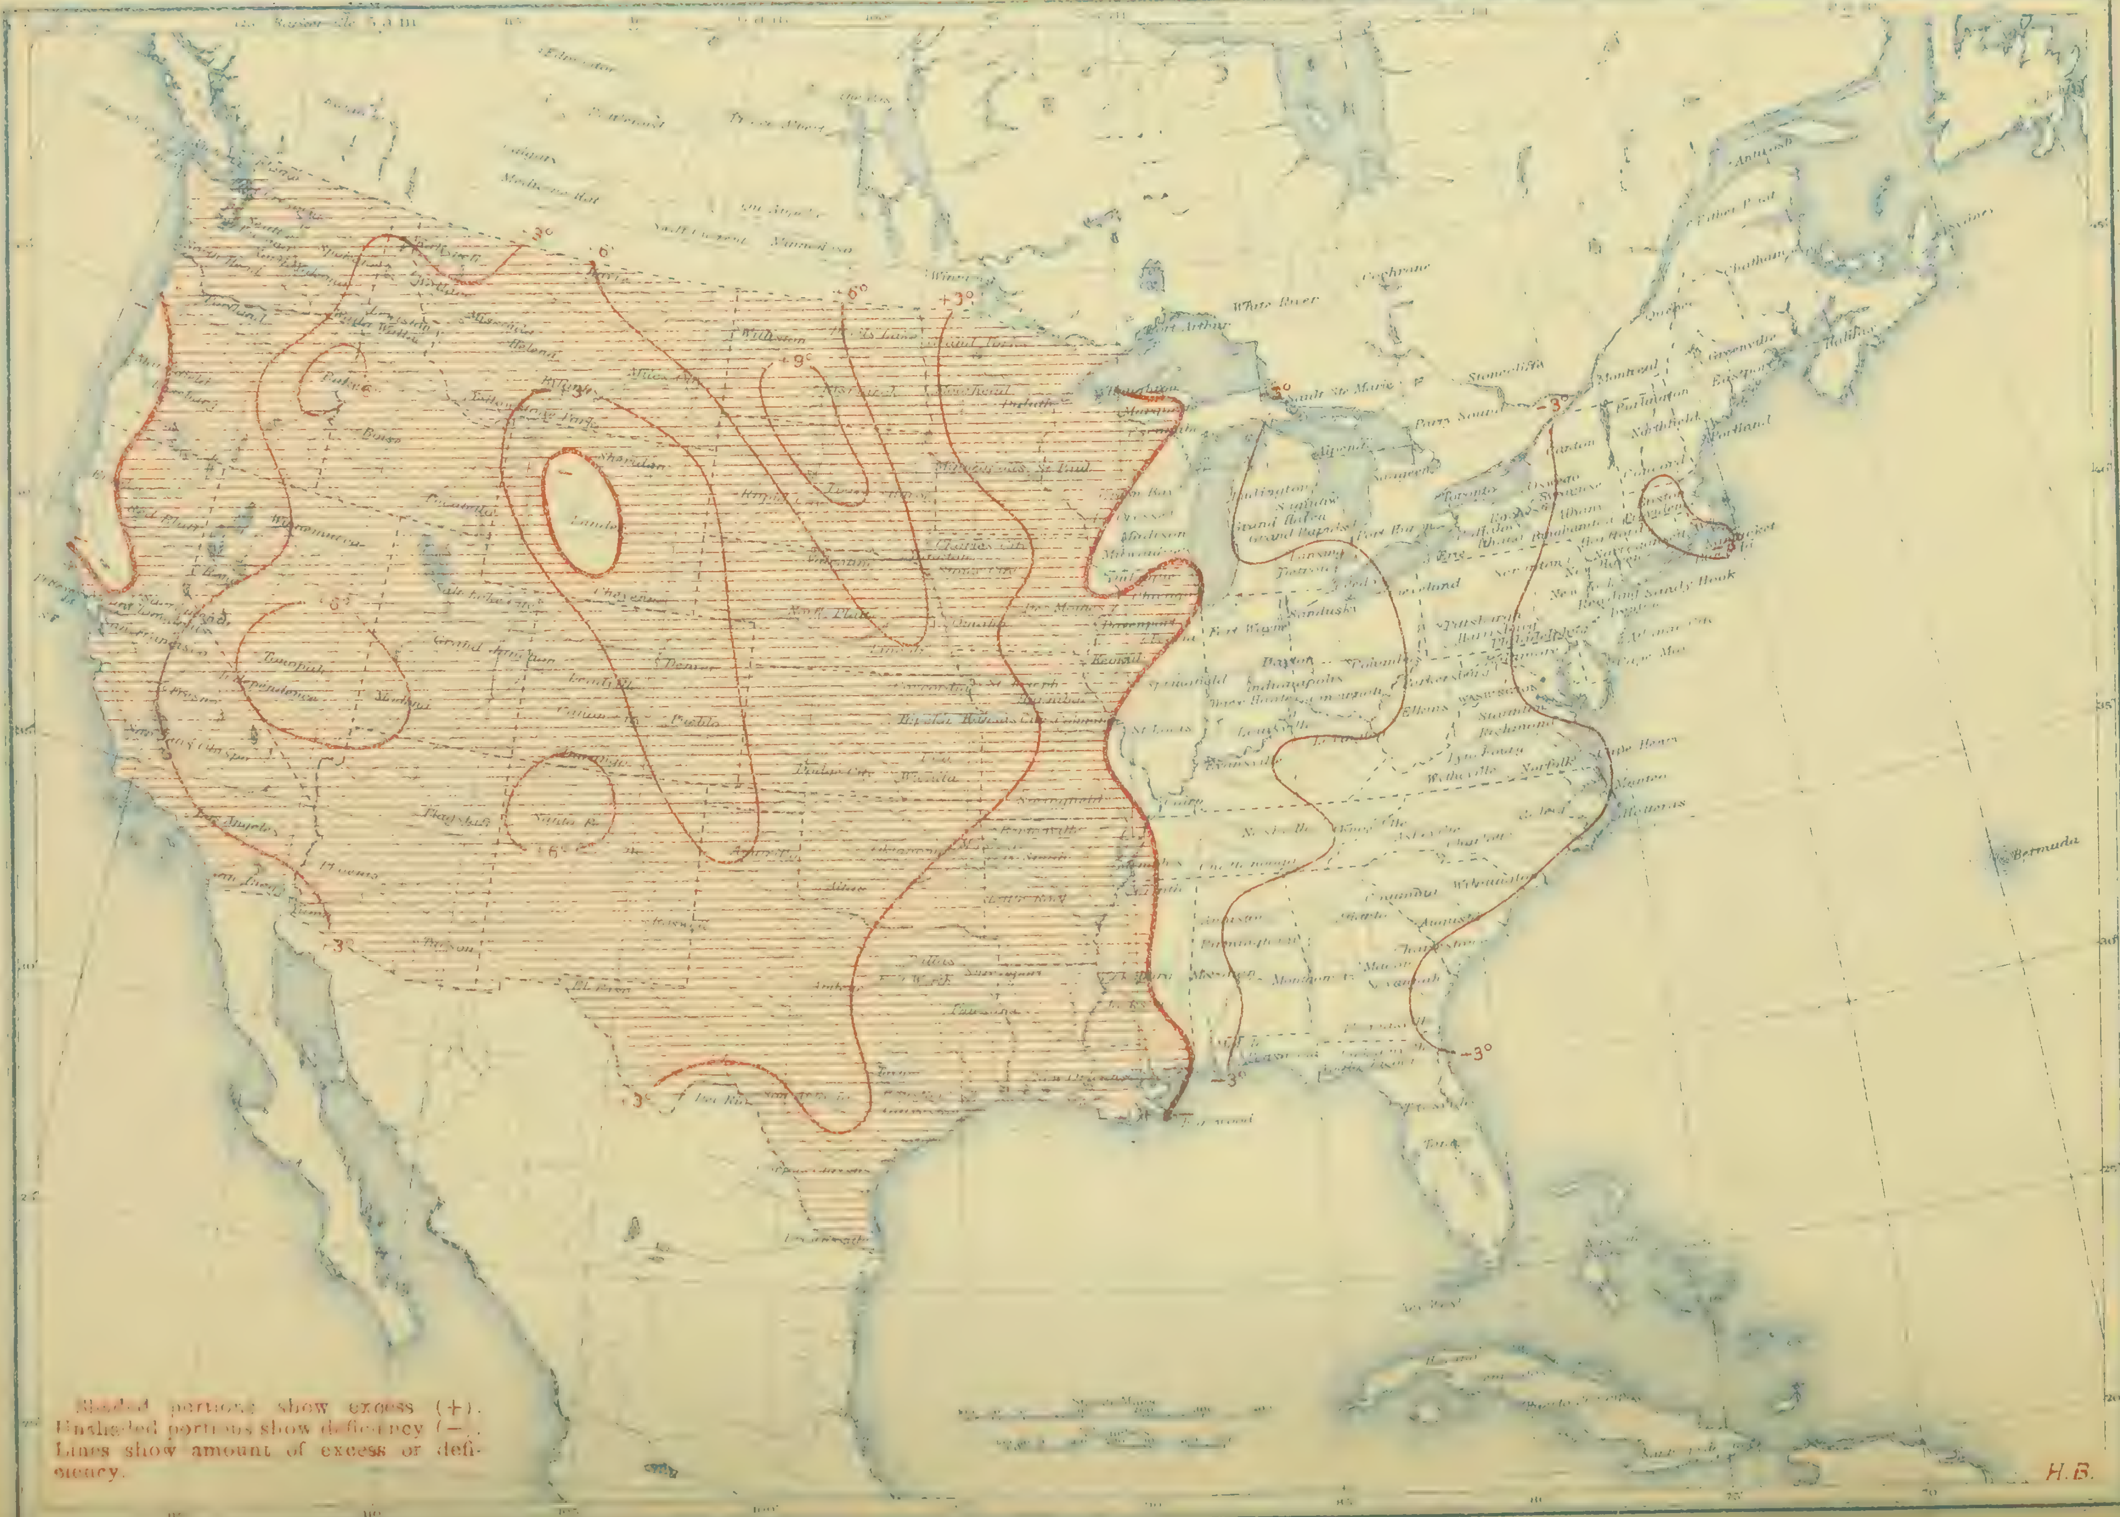
NORTH DAKOTA SECTION

FEBRUARY, 1920

BY
ORRIS W. ROBERTS
METEOROLOGIST

BISMARCK, N. DAK.
WEATHER BUREAU OFFICE
APRIL 6, 1920.

Departure of the Mean Temperature from the Normal, February, 1920.



Shaded portions show excess (+). Unshaded portions show deficiency (−). Lines show amount of excess or deficiency.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXIX. Bismarck, N. D., February, 1920. No. 2.

GENERAL SUMMARY.

Favorable weather conditions prevailed during the month. The temperature was above normal during practically the entire month. A severe cold wave occurred on the 14th, but the recovery to normal temperature was rapid, and on the 16th the temperature was again above normal. The monthly means averaged about 8° above normal in the western half of the State, but the excess decreased to less than one degree at some extreme eastern stations. The precipitation, which was practically all in the form of snow, was generally light in amount, and the falls were well distributed throughout the month. The mild weather in the western portion of the State was favorable for range stock, but the snow interfered considerably with grazing, especially over northern sections.

TEMPERATURE.

The mean temperature for the State was 12.5°, or 4.6° above the normal, and 4.8° higher than the mean for February, 1919. The highest mean reported was 21.3° at Bowman, Bowman County; the lowest was −4.0° at Pembina, Pembina County. The highest temperature reported was 53° at Hettinger, Adams County, on the 8th; the lowest was −36° at Hannah, Cavalier County, and Willow City, Bottineau County, on the 14th. The greatest monthly range was 73° at Beach, Golden Valley County; the least was 55° at Ellendale and Fullerton, Dickey County. The greatest daily range was 60° at Bowbells, Burke County, on the 16th.

PRECIPITATION.

The average precipitation for the State was 0.30 inch, or 0.19 inch below the normal, and 0.36 inch less than the average for February, 1919. The greatest monthly amount reported was 1.70 inches at Pembina, Pembina County; the least was a trace at seven stations. The greatest amount recorded in any twenty-four consecutive hours was 0.60 inch at Pembina, Pembina County, on the 19th. The average number of days with 0.01 inch or more of precipitation was 3. Practically all the precipitation was in the form of snow, and the average fall was 3.2 inches.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for February, 1920.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXIX. Bismarck, N. D., April, 1920. No. 4.

GENERAL SUMMARY.

The month opened with a cold wave, and the temperature dropped to zero or below at most stations, from the 2d to the 6th, inclusive, establishing new low records for April at many stations. After the first week there was considerable moderation, but the temperature remained below normal throughout the month. The day temperatures were uniformly low, as shown by the fact that the highest temperature reported was only 63°. The monthly mean of 32.1° is practically equal to the lowest recorded April mean of 31.9° in April, 1907. The precipitation during the first nineteen days of the month was scanty, only light scattered amounts falling during this period. From the 20th to the 25th, precipitation was general over the State, and the bulk of the precipitation of the month occurred during this period. Frozen and wet fields resulted in much delay to farm work, and the seeding of spring wheat was seriously delayed, resulting in a decreased acreage. Pastures were slow in starting, and livestock suffered from lack of forage.

TEMPERATURE.

The mean temperature for the State was 32.1°, or 9.6° below the normal, and 10.2° lower than the mean for April, 1919. The highest mean reported was 36.8° at Steele, Kidder County; the lowest was 26.5° at Bowbells, Burke County. The highest temperature reported was 63° at Beach, Golden Valley County, on the 13th, and at McKinney, Renville County, on the 28th; the lowest was −11° at Bowbells, Burke County, on the 3d and 5th, at Grafton, Walsh County, on the 3d, at Howard, Williams County, on the 5th, and at Westhope, Bottineau County, on the 4th. The greatest daily range was 46° at Hettinger, Adams County, on the 6th. The greatest monthly range was 73° at McKinney, Renville County; the least was 49° at Crosby, Divide County.

PRECIPITATION.

The average precipitation for the State was 0.83 inch, or 0.55 inch below the normal, and 0.67 inch less than the average for April, 1919. The greatest monthly amount reported was 2.39 inches at Hettinger, Adams County; the least was 0.10 inch at Pembina, Pembina County. The greatest amount recorded in any twenty-four consecutive hours was 0.90 inch at Bowman, Bowman County, on the 16th. The average snowfall was 2.4 inches. The average number of days with 0.01 inch or more of precipitation was 5. The distribution of precipitation over the State was fairly uniform, but the larger amounts were recorded in the extreme western and the extreme southern portions.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S D Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for April, 1920.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXIX. BISMARCK, N. D., MAY, 1920. No. 5.

GENERAL SUMMARY.

The weather during the month was generally pleasant and favorable for the advancement of farm work and other outdoor pursuits. The temperature averaged slightly above normal and was very uniform throughout the month. Freezing temperatures were not generally recorded after the 1st, and at seven stations the temperature did not reach the freezing point during the month. The day temperatures were also moderate. The wind movement was nearly the average, but there were few high winds and less than the usual number of thunderstorms. The precipitation was generally below normal, but was well distributed throughout the month in the form of light showers. The southeastern portion of the State received the greatest amount of precipitation, varying there from two to over three inches; the north-central portion received the least, most stations in that district reporting about one inch or less. Spring grain seeding, which had been considerably delayed by the inclement weather of April, made good advancement in May. Spring wheat germinated well, and made excellent growth generally. Flax seeding and germination were delayed by dry soil in some sections. Pastures and ranges were generally in good condition, and range stock improved during the month.

TEMPERATURE.

The mean temperature for the State was 53.9°, or 1.3° above the normal, and 1.6° lower than the mean for May, 1919. The highest mean reported was 58.0° at Pembina, Pembina County; the lowest was 47.4° at Carson, Grant County. The highest temperature reported was 89° at Howard, Williams County, on the 21st; the lowest was 20° at Colgate, Steele County, and at Minto, Walsh County, on the 1st. The greatest daily range was 57° at Minot, Ward County, on the 21st. The greatest monthly range was 64° at Colgate, Steele County; the least was 40° at Carson, Grant County.

PRECIPITATION.

The average precipitation for the State was 1.74 inches, or 0.81 inch below the normal, and 1.51 inches less than the average for May, 1919. The greatest monthly amount reported was 3.78 inches at Selfridge, Sioux County, and at Valley City, Barnes County; the least was 0.56 inch at Dunseith, Rolette County. The greatest amount recorded in any twenty-four consecutive hours was 1.31 inches at Lamoine, Kidder County, on the 25th. The average number of days with 0.01 inch or more of precipitation was 7. Snow in measurable quantities was reported at three stations, and traces of snow at five other stations.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for May, 1920.

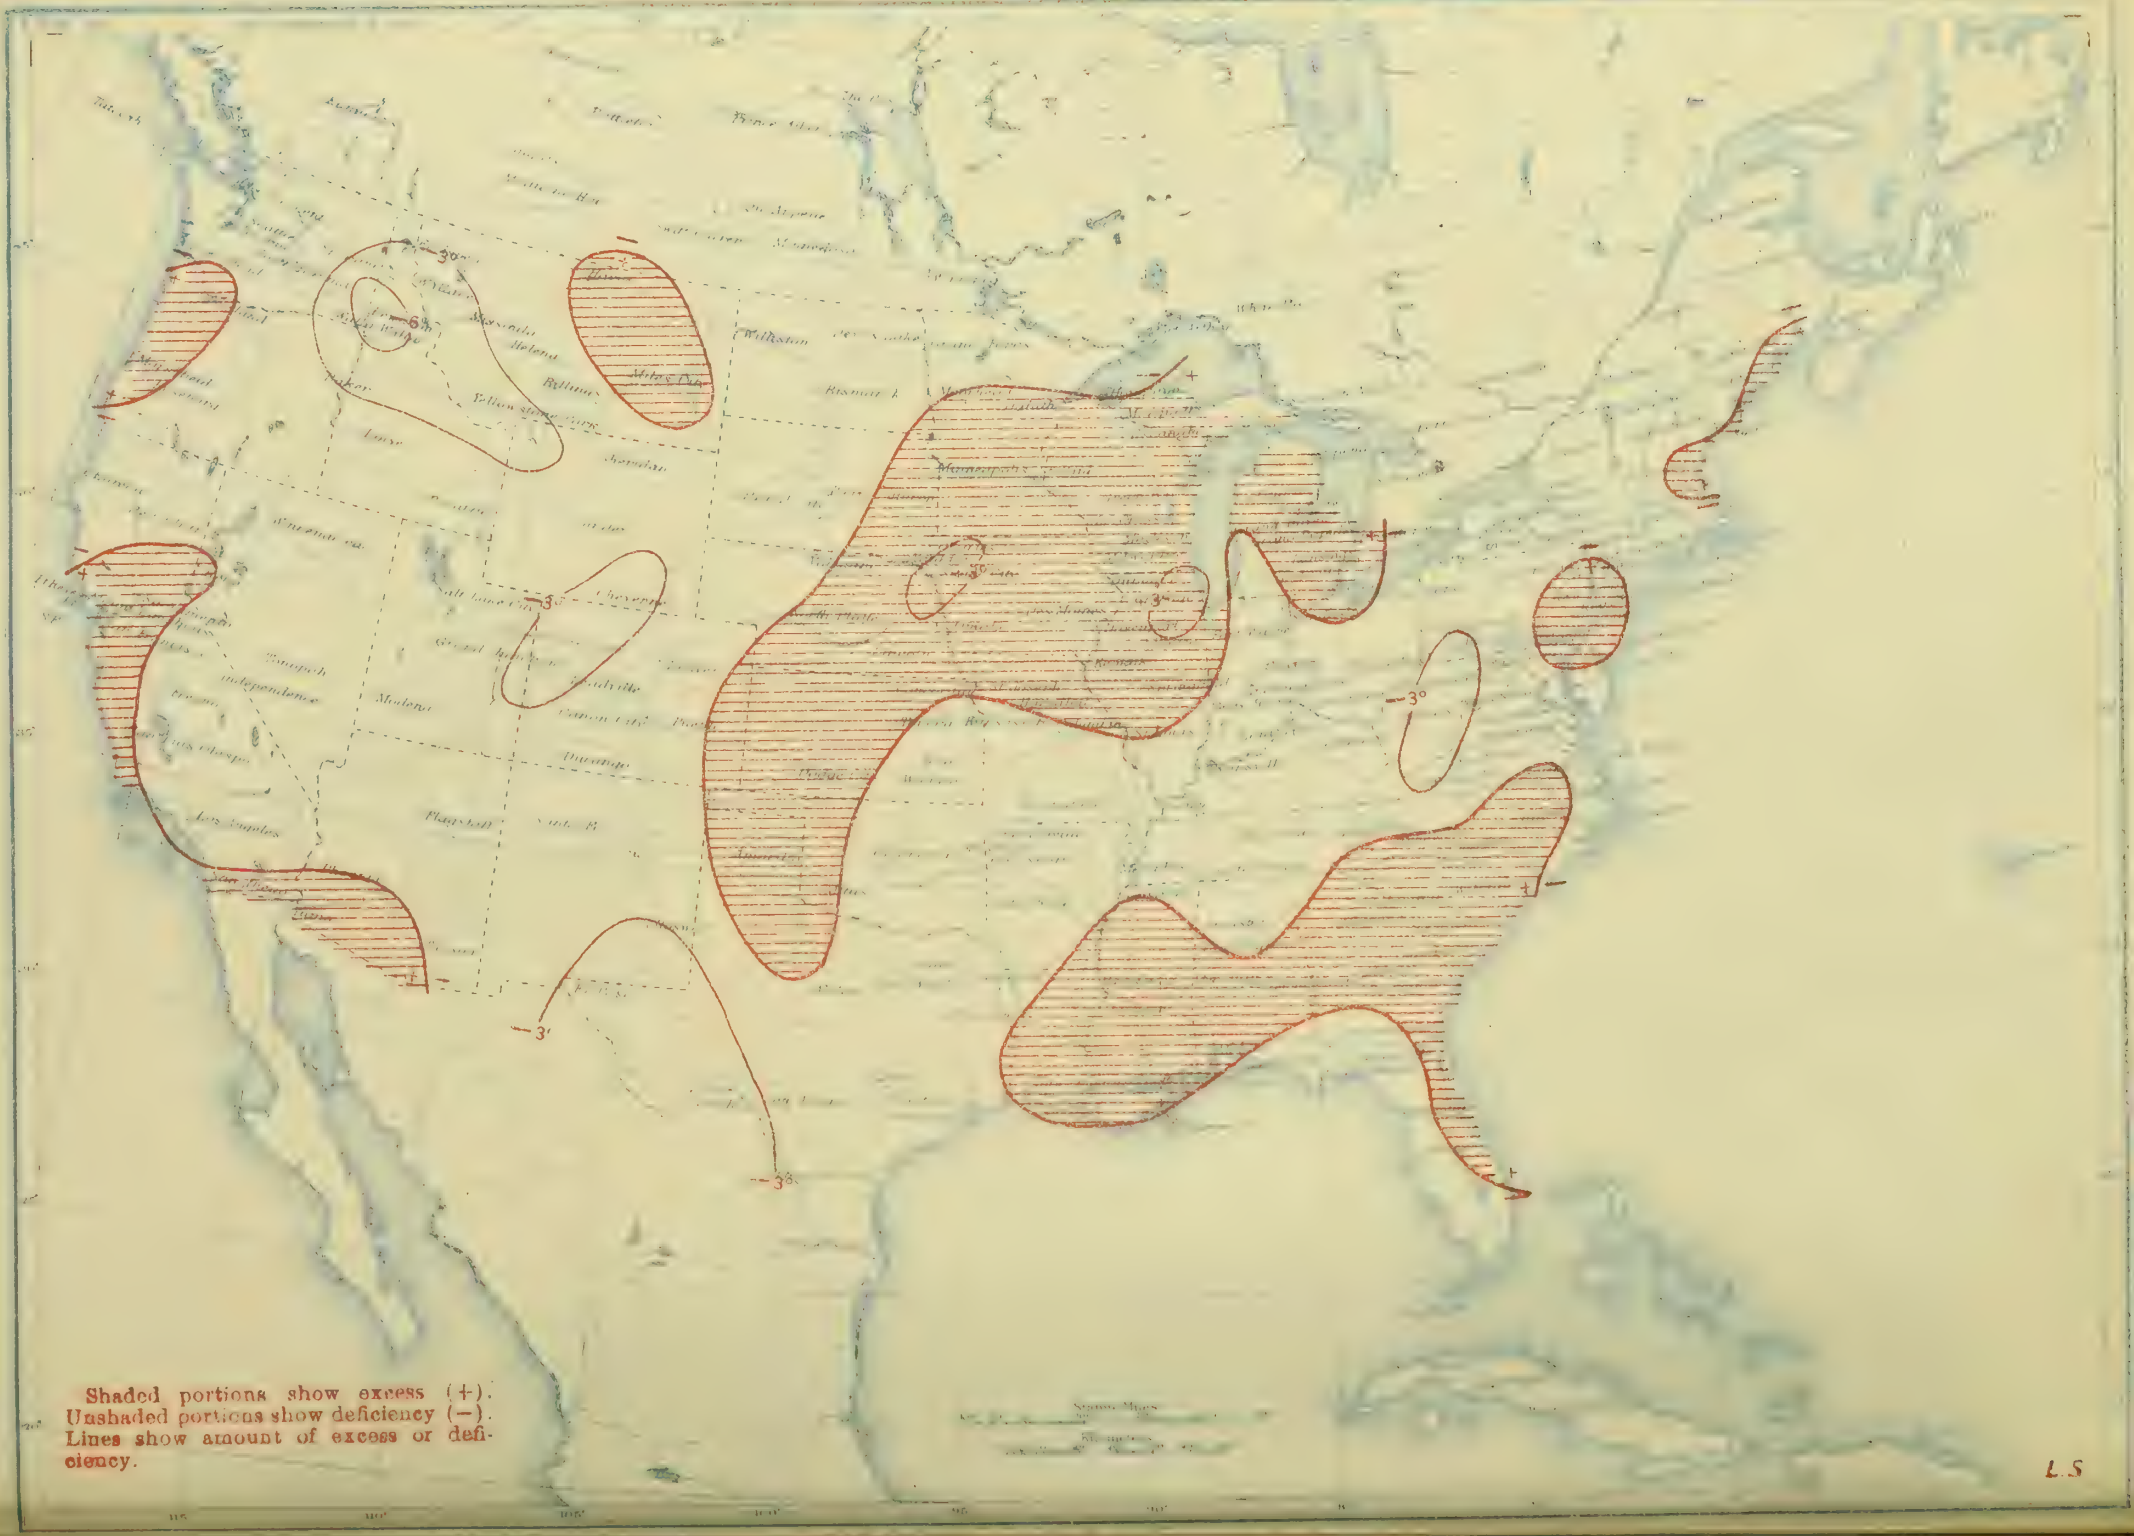
BISMARCK, N. DAK.
WEATHER BUREAU OFFICE
AUGUST 21, 1920.

Departure of the Mean Temperature from the Normal, June, 1920.



Shaded portions show excess (+).
Unshaded portions show deficiency (−).
Lines show amount of excess or deficiency.

U S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXIX. Bismarck, N. D., June, 1920. No. 6.

GENERAL SUMMARY.

The weather approximated the normal in most respects during the month, and as a result crops and other vegetation made excellent growth generally. Scattering frost occurred on the 2d, 3d and 4th, but no damage of consequence was reported. During the remainder of the month the temperature was moderate generally; only a few stations reported maximum temperatures in excess of 90°. The precipitation averaged slightly above normal, and was well distributed throughout the month, except that there was a deficiency in many sections during the first half of the month. The distribution over the State was good; the greater portion of the State received between three and four inches of rainfall, but considerable areas in the west-central, east-central and extreme southeastern portions received from four to over seven inches, and areas in the south-central, extreme northeastern and extreme southwestern portions received less than two inches. Crops generally made excellent progress, except that grains in the drier areas were thin and short in places. Grasshoppers were reported in damaging numbers in some western localities. Pastures and livestock were in excellent condition generally.

Much damage was done by a severe windstorm in Cass and portions of adjacent counties on the 8th. Damage to farm buildings was general over the storm area. A tornado cloud was observed during the storm between Gardner and Grandin, Cass County. One man was killed and four injured in that vicinity.

TEMPERATURE.

The mean temperature for the State was 62.2°, or 0.6° below the normal, and 5.0° lower than the mean for June, 1919. The highest mean reported was 65.4° at Mandan, Morton County; the lowest was 59.7° at Minot, Ward County. The highest temperature reported was 98° at Mott, Hettinger County, on the 8th; the lowest was 26°, also at Mott, on the 3d, a range of 72° for the month. The least monthly range was 47° at Pembina, Pembina County. The greatest daily range was 50° at Eckman, Bottineau County, on the 13th.

PRECIPITATION.

The average precipitation for the State was 3.62 inches, or 0.12 inch above the normal, and 1.31 inches more than the average for June, 1919. The greatest monthly amount reported was 7.42 inches at Epping, Williams County; the least was 0.50 inch at Pembina, Pembina County. The greatest amount recorded in any twenty-four consecutive hours was 4.02 inches at Epping, Williams County, on the 15th. The average number of days with 0.01 inch or more of precipitation was 11. Showery conditions prevailed during the entire month, and general rains occurred on the 20th and 21st and on the 25th and 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for June, 1920.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXIX. Bismarck, N. D., July, 1920. No. 7.

GENERAL SUMMARY.

Cool weather characterized the weather at the opening of the month, and this condition prevailed during the first decade. Higher temperature followed, and continued throughout the month. The weather during the first part of the month was beneficial to all crops, especially late sown grains. The higher temperatures which followed ripened grain rapidly, too rapidly in some parts, and were especially beneficial to corn, of which there is a greatly increased acreage in North Dakota this year. Considerable damage to potatoes was reported from insects, the hot weather apparently being favorable for their propagation. Local hailstorms were reported from various parts of the State, the damage being considerable. Harvesting of all small grains was well advanced at the close of the month, and some threshing of rye and early wheat was reported. Pastures, ranges and meadows were in excellent condition generally; first crop of alfalfa was in stack, some cutting of second crop and prairie hay was reported.

TEMPERATURE.

The mean temperature for the State was 68.3°, or 0.8° above the normal, and 2.9° lower than the mean for July, 1919. The highest mean reported was 72.7° at Bowman, Bowman County; the lowest was 65.0° at Langdon, Cavalier County. The highest temperature reported was 103° at Mandan, Morton County, on the 22d; the lowest was 37° at Hannah and Langdon, both in Cavalier County, on the 31st. The greatest monthly range of temperature was 61° at Beach, Golden Valley County; the least was 42° at Steele, Kidder County.. The greatest daily range was 47° at Beach, Golden Valley County, and at Hettinger, Adams County, on the 27th and 3d, respectively.

PRECIPITATION.

The average precipitation for the State was 2.16 inches, or 0.46 inch below the normal, and 0.35 inch more than the average for July, 1919. The greatest monthly amount reported was 4.89 inches at Fullerton, Dickey County; the least was 0.78 inch at Beach, Golden Valley County, and at Minto, Walsh County. The greatest amount recorded in any twenty-four consecutive hours was 2.13 inches at Lisbon, Ransom County, on the 1st. The average number of days with 0.01 inch or more of precipitation was 7. Although the precipitation was unevenly distributed geographically, the distribution throughout the month was quite uniform.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D. Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for July, 1920.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXIX. Bismarck, N. D., August, 1920. No. 8

GENERAL SUMMARY.

The month was warm and dry, with abundant sunshine. The daily range of temperature was usually large, with high day temperatures and cool nights. There was an average of ten days with 90° or above, well distributed through the month. Although the rainfall was only 68 per cent. of the normal, drought conditions were more severe than this would indicate, due to the fact that the most generally beneficial rains came near the end of the month. The showers, which occurred in scattered areas, chiefly on the 3d, 10th and 19th, were mostly light, although heavy in limited areas. Of the total monthly amounts, the heavier falls occurred over the north-central portion, where the amounts exceeded three inches over considerable areas from Bottineau County to Wells County; while most of the lighter amounts occurred in the Red River Valley, where the totals were less than one inch at most stations. The drought caused serious deterioration of corn, flax, potatoes and late grains. Rust seriously affected the spring wheat crop in all sections, but chiefly in the eastern portion. Grasshopper damage to crops was serious in the north-central section and in scattered localities elsewhere. With favorable harvesting weather, and labor plentiful, the grain harvest was completed before the end of the month in most sections. —E. G. L.

TEMPERATURE.

The mean temperature for the State was 68.8°, or 3.4° above the normal, and 0.9° lower than the mean for August, 1919. The highest mean reported was 71.6° at Mott, Hettinger County; the lowest was 65.6° at Linton, Emmons County. The highest temperature reported was 108° at Arnegard, McKenzie County, on the 17th; the lowest was 28° at Minto, Walsh County, on the 22d. The greatest monthly range was 72° at Minto, Walsh County; the least was 54° at Carson, Grant County. The greatest daily range was 57° at Berthold Agency, McLean County, on the 25th, and at Minto, Walsh County, on the 22d.

PRECIPITATION.

The average precipitation for the State was 1.56 inches, or 0.72 inch below the normal, and 0.06 inch less than the average for August, 1919. The greatest monthly amount reported was 4.83 inches at Bottineau, Bottineau County; the least was 0.14 inch at Pembina, Pembina County. The greatest amount recorded in any twenty-four consecutive hours was 3.07 inches at Bottineau, Bottineau County, on the 19th. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS.

Auroras were observed at Devils Lake on the 3d, at Bismarck and Fullerton on the 7th, and at Bismarck, Energy, McHenry and McKinney on the 21st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for August, 1920.

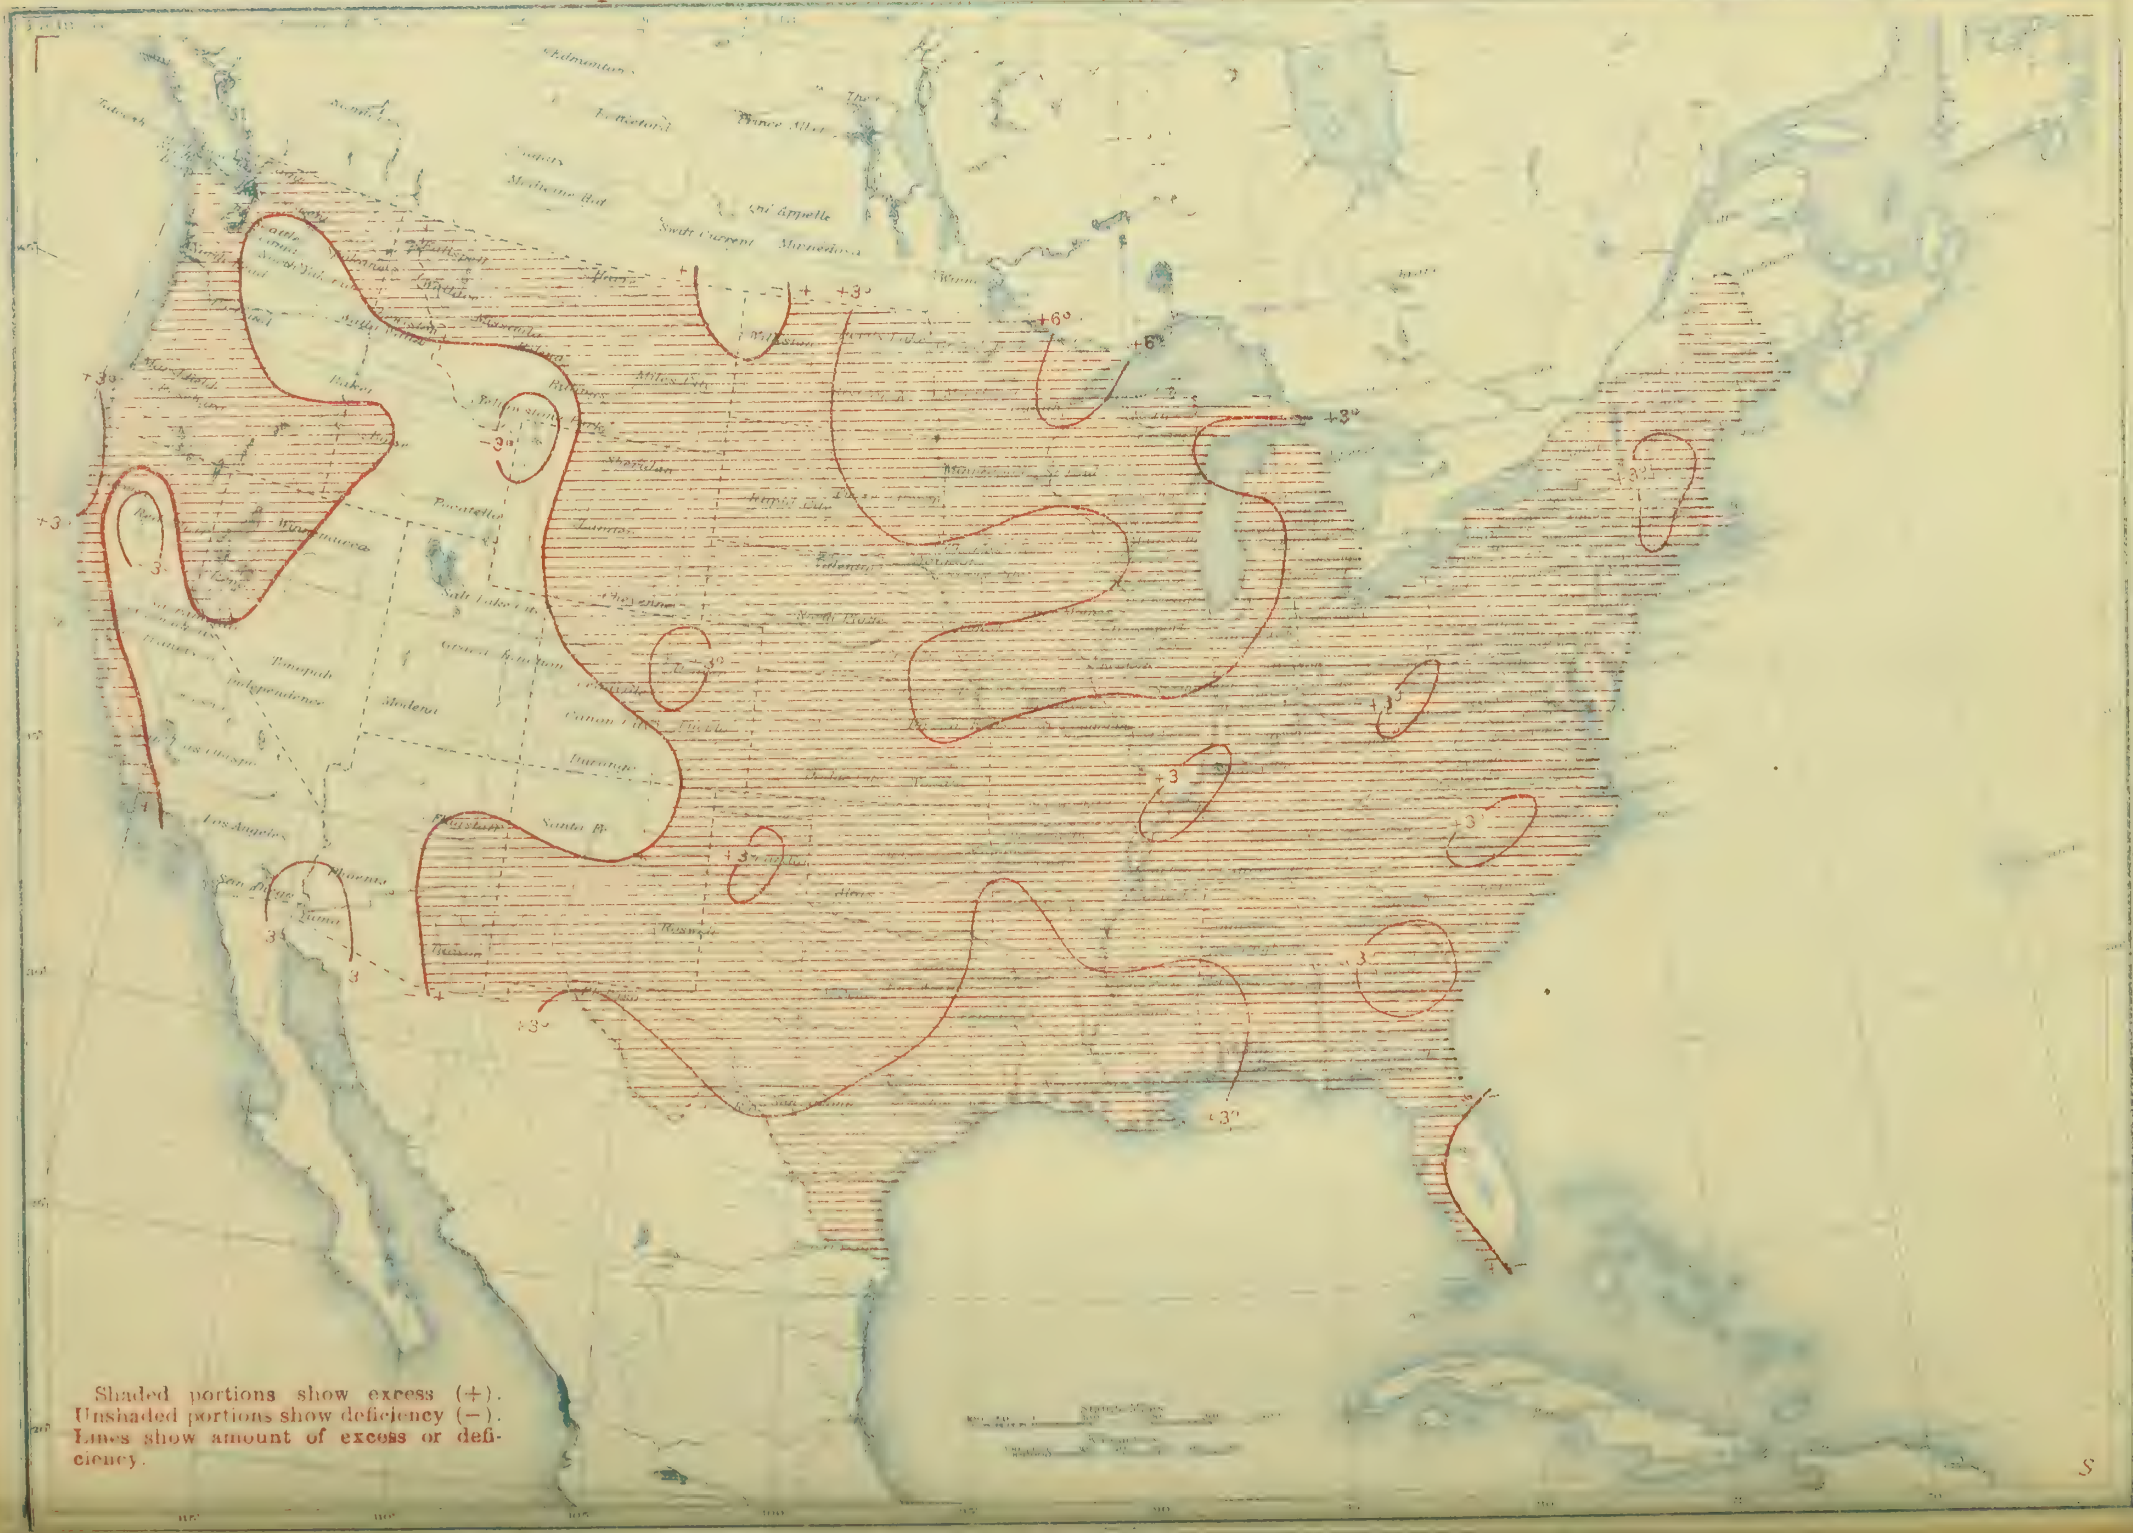
Departure of the Mean Temperature from the Normal, September, 1920.



U S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXIX. Bismarck, N. D., September, 1920. No. 9

GENERAL SUMMARY.

Generally seasonable weather conditions prevailed over the greater portion of the State during the month. The mean temperature averaged 2.6° above normal, due mostly to high night temperatures, as the day temperatures were moderate and not generally above normal. Killing frosts were not recorded until the cold period beginning on the 28th. At some northeastern stations no killing frosts were recorded. The rainfall was generally light during the first seventeen days of the month. A rainy period set in on the 18th and lasted until the 26th, followed by fair weather until the end of the month. During the above-mentioned rainy period heavy falls occurred in the eastern third of the State, the monthly amounts exceeding four inches over several counties in the northeastern portion and in parts of some southeastern counties. Although delayed by rains in some sections, threshing made good progress generally, and was nearing completion at the end of the month. The corn crop improved generally, and was well matured before frosts occurred. Conditions were favorable for fall plowing in the eastern portion, but it was too dry over much of the western and central portions. —E. G. L.

TEMPERATURE.

The mean temperature for the State was 59.0°, or 2.6° above the normal, and 0.4° higher than the mean for September, 1919. The highest mean reported was 62.0° at McLeod, Ransom County, and at Wahpeton, Richland County; the lowest was 55.2° at Bowman, Bowman County. The highest temperature reported was 99° at Linton, Emmons County, on the 17th; the lowest was 19° at Hettinger, Adams County, on the 29th. The greatest monthly range was 77° at Hettinger, Adams County; the least was 57° at Hannah, Cavalier County. The greatest daily range was 59° at Berthold Agency, McLean County, on the 17th.

PRECIPITATION.

The average precipitation for the State was 2.26 inches, or 0.62 inch above the normal, and 1.34 inches more than the average for September, 1919. The greatest monthly amount reported was 7.38 inches at Larimore, Grand Forks County; the least was 0.46 inch at Willow City, Bottineau County. The greatest amount recorded in any twenty-four consecutive hours was 3.84 inches at Devils Lake, Ramsey County, on the 18th and 19th. The average number of days with 0.01 inch or more of precipitation was 8. With the exception of traces of snow at several stations on the 28th, all precipitation was in the form of rain.

AURORAS.

Auroras were observed as follows: On the 3d at Beach, Bismarck and Energy; on the 4th at Arnegard and Energy; on the 7th at Energy and Howard; on the 8th at Beach, Berthold Agency, Devils Lake, Donnybrook, Grand Forks, Howard and Linton; on the 9th at Devils Lake, Eckman and Grand Forks; on the 10th and 11th at Eckman; on the 14th at Berthold Agency, Energy and Westhope; on the 15th at Bismarck and Wahpeton; on the 16th at Ellendale, Berthold Agency and Energy; on the 17th at Linton; on the 20th at Energy; on the 22d at Beach and Bismarck; on the 26th at Ellendale; on the 28th at Howard, and on the 29th and 30th at Valley City.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for September, 1920.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXIX. BISMARCK, N. D., OCTOBER, 1920. No. 10

GENERAL SUMMARY.

The month was the second warmest October of record in North Dakota since the State climatological service was established in 1892. The warmest October was that of 1914, with a mean temperature of 50.0°, compared with 49.3° in 1920, and 33.5° in 1919, which was the coldest October of record. The first week of the month was especially warm, temperatures of 90° and over being recorded at many stations on the 5th, 6th and 7th. Cooler weather came on the 8th, but the temperature remained moderate and hard freezes occurred only during the last five days of the month. The precipitation was very light generally, only a few stations in the extreme western and the extreme southeastern portions reporting more than one inch, while seven stations in the east-central portion reported no precipitation or merely traces. Most of the precipitation, which was practically all in the form of rain, occurred during the period from the 21st to the 23d, inclusive, the rest of the month being generally fair. As a result of the favorable weather threshing was finished in good season and other outside activities made good progress. Fall plowing was hindered by dry soil in many sections.

TEMPERATURE.

The mean temperature for the State was 49.3°, or 5.5° above the normal, and 15.8° higher than the mean for October, 1919. The highest mean reported was 53.4° at Wahpeton, Richland County; the lowest was 44.6° at McKinney, Renville County. The highest temperature reported was 95° at New Salem, Morton County, on the 6th; the lowest was 6° at Napoleon, Logan County, on the 28th. The greatest monthly range was 95° at Fessenden, Wells County, Napoleon, Logan County, and New Salem, Morton County; the least was 41° at Pembina, Pembina County. The greatest daily range was 55° at Eckman, Bottineau County, on the 4th, and at McKinney, Renville County, on the 15th and 16th.

PRECIPITATION.

The average precipitation for the State was 0.46 inch, or 0.54 inch less than the normal, and 0.62 inch less than the average for October, 1919. The greatest monthly amount reported was 1.51 inches at Beach, Golden Valley County; there was none at Cooperstown, Griggs County, Lamoine, Kidder County, Maddock, Benson County, and Parshall, Mountrail County. The greatest amount recorded in any twenty-four consecutive hours was 1.11 inches at Beach, Golden Valley County, on the 22d. The average number of days with 0.01 inch or more of precipitation was 3. Sixteen stations reported traces of snowfall, but only two stations in the extreme western portion reported measurable amounts of snow.

AURORAS.

Auroras were observed at Eckman on the 2d, at Devils Lake on the 5th, at Eckman on the 6th, at Devils Lake and Berthold Agency on the 7th, at Amenia, Berthold Agency, Devils Lake and Valley City on the 9th, at Towner and Valley City on the 10th, at Valley City on the 14th and 15th, and at Towner on the 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Selfridge, McLaughlin, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for October, 1920.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXIX. BISMARCK, N. D., NOVEMBER, 1920. No. 11

GENERAL SUMMARY.

Excepting the cold week beginning on the 9th, the temperature during the month averaged considerably above the normal, the precipitation was generally light, but there was more than the usual cloudiness. A cold wave occurred on the 9th, and low temperatures continued until the 15th, during which period sub-zero readings were recorded at most stations, but on all other dates the temperature was moderate. The precipitation was generally scanty, but in the northeastern portion the falls were above the normal at most stations, the totals ranging near one inch in the extreme northeastern counties. About two-thirds of the precipitation was in the form of snow. The low temperatures of the period from the 9th to 15th, inclusive, caused the Missouri River to freeze over, and ice to the thickness of from six to ten inches formed. The warm weather during the latter half of the month caused the ice to soften and break. The break-up at Bismarck occurred on the 28th, and the temporary trestle bridge used in the construction of a wagon bridge at this point was carried away. —E. G. L.

TEMPERATURE.

The mean temperature for the State was 28.0°, or 1.4° above the normal, and 12.4° higher than the mean for November, 1919. The highest mean reported was 33.2° at Steele, Kidder County; the lowest was 22.8° at Dunseith, Rolette County. The highest temperature reported was 65° at Steele, Kidder County, on the 3d and 4th; the lowest was -14° at Dunn Center, Dunn County, on the 9th. The greatest monthly range was 71° at Beach, Golden Valley County, Dunn Center, Dunn County, and Hettinger, Adams County; the least was 38° at Pembina, Pembina County. The greatest daily range was 48° at Fessenden, Wells County, on the 3d.

PRECIPITATION.

The average precipitation for the State was 0.37 inch, or 0.21 inch less than the normal, and 0.79 inch less than the average for November, 1919. The greatest monthly amount reported was 1.10 inches at Langdon, Cavalier County; the least was a trace at Bowbells, Burke County, Donnybrook, Ward County, and Dunn Center, Dunn County. The greatest amount recorded in any twenty-four consecutive hours was 0.80 inch at Pembina, Pembina County, on the 28th. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 2.1 inches.

AURORAS.

Auroras were observed at Linton on the 4th, at Berthold Agency on the 5th, at Pettibone on the 7th, at Valley City on the 8th, at Devils Lake, Larimore and Pettibone on the 12th, at Ellendale on the 13th, at Devils Lake and Ellendale on the 17th, at Steele on the 19th, and at Arnegard and Marmarth on the 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Departure of the Mean Temperature from the Normal, December, 1920.

Shaded portions show excess (+). Unshaded portions show deficiency (−). Lines show amount of excess or deficiency.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXIX. Bismarck, N. D., December, 1920. No. 12

GENERAL SUMMARY.

Three well defined temperature periods characterized the month. The first sixteen days was a warm period, during which the day temperatures were above freezing on nearly all days, and the minimum temperatures were well above zero. This was followed by a cold period lasting until the 28th. During this period the minimum temperatures were below zero on all days, and the maximum temperatures were near zero. On the 28th there was a rapid rise in temperature, followed by moderate temperature until the end of the month. Due to the preponderance of the warm periods, the mean was 2.2° in excess of the normal. The precipitation was light in practically all sections, averaging 60 per cent of the normal. There was practically no precipitation on the first seven days, but scattering falls occurred thereafter, mostly on the 8th, 14th, 20th, 25th and 31st. Practically all of the precipitation was in the form of snow, but rain fell at a number of stations on the 31st. There was very little snow cover in any section during the month, the amounts that accumulated during the cold period disappearing generally during the warm period at the end of the month. The Missouri River, which was open at the beginning of the month, following the break-up on November 28th, froze over at the beginning of the cold period on the 16th and 17th.

TEMPERATURE.

The mean temperature for the State was 15.2°, or 2.2° above the normal, and 7.8° higher than the mean for December, 1919. The highest mean reported was 21.8° at Amidon, Slope County; the lowest was 8.6° at Willow City, Bottineau County. The highest temperature reported was 59° at New Salem, Morton County, on the 1st; the lowest was −32° at Langdon, Cavalier County, on the 27th. The greatest monthly range was 86° at New Salem, Morton County; the least was 52° at Cando, Towner County. The greatest daily range was 67° at Dickinson, Stark County, on the 28th.

PRECIPITATION.

The average precipitation for the State was 0.32 inch, or 0.22 inch less than the normal, and 0.14 inch less than the average for December, 1919. The greatest monthly amount reported was 1.50 inches at Hannah, Cavalier County; the least was a trace at Donnybrook, Ward County. The greatest amount recorded in any twenty-four consecutive hours was 0.60 inch at Hannah, Cavalier County, on the 30th. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 3.2 inches.

AURORAS.

Auroras were observed at Skaar on the 5th, at Energy on the 6th, at Fessenden on the 8th, at Amidon on the 17th, at Amidon and Eckman on the 26th, at Eckman and Ellendale on the 27th, and at Napoleon on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S. D.; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for December, 1920.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXIX. BISMARCK, N. D., ANNUAL, 1920. No. 13

GENERAL SUMMARY.

While the temperature for the year was quite uniform, and nearly the normal in all sections, there was a divergence in precipitation, causing the results in crop production to range from poor in the western and central portions to good in the eastern portion. The year opened with unseasonably cold weather and heavy snowfall, and was followed in February and March with milder temperature and nearly normal precipitation. April opened cold, records for low April temperatures being broken in many parts of the State. Farm and other outdoor work progressed rapidly under favorable circumstances during May, and also continued during June. High temperatures and somewhat deficient precipitation during July resulted in deterioration to crops in the central and western parts of the State, while rust damaged crops in the eastern part. August was nearly a continuation of July conditions, and crops were seriously damaged by drought in the western half of the State. The weather during the remaining months was generally favorable for the harvesting and threshing of crops, but mostly too dry for fall plowing, of which less than the usual amount was done.

The mean annual temperature was 39.5°, or 0.7° above the normal, and 0.9° higher than the mean for 1919. The highest mean annual temperature reported was 42.3° at Hettinger, Adams County; the lowest was 35.8° at Willow City, Bottineau County. The highest temperature reported was 108° at Arnegard, McKenzie County, on August 17th; the lowest was -44° at Berthold Agency, McLean County, on January 24th. The temperature averaged above the normal during eight months, and below four months. During the past twenty-nine years there have been ten warmer years, seventeen colder years, and one year with the same mean annual temperature. The highest mean annual temperature recorded was 41.0° in 1900 and 1910; the lowest was 35.8° in 1893. The highest temperature recorded in the State was 124° at Medora, Billings County, on September 3, 1912; the lowest was -56° at Goodall, McKenzie County, on January 12, 1916.

The average precipitation for the State was 15.34 inches, or 2.60 inches below the normal, and 0.42 inch lower than the average for 1919. The greatest annual precipitation reported was 23.78 inches at Fullerton, Dickey County; the least was 9.88 inches at Dunseith, Rolette County. The greatest monthly amount reported was 7.42 inches at Epping, Williams County, in June; there was none in January at Hettinger, Adams County; April at Parshall, Mountrail County, and in October at Lamoine, Kidder County, Maddock, Benson County, and Parshall, Mountrail County. The precipitation averaged above the normal during three months, and below nine months. During the past 29 years there have been 23 wetter and but 5 drier years. The heaviest annual precipitation ever recorded in the State was 23.57 inches in 1896; the least was 10.92 inches in 1917. The average snowfall for the State was 27.9 inches. The average number of days with 0.01 inch or more of precipitation was 64. There were 166 clear days, 108 partly cloudy, and 92 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—The weather during the month was unfavorable from the standpoint of outdoor work, rail and wagon traffic, and for livestock. During the 29 years since the establishment of the climatological service in North Dakota, the mean temperature for January was lower but nine times, and the average precipitation was exceeded but three times. Owing to the scarcity of feed in the central and western parts of the State, livestock suffered to a considerable extent, and some losses resulted.

FEBRUARY.—Favorable weather conditions prevailed. The temperature was above the normal during practically the entire month. A severe cold wave occurred on the 14th, but the recovery to normal temperature was rapid. The monthly means averaged about 8° above normal in the western half of the State, but the excess decreased to less than 1° at some extreme eastern stations. The precipitation, which was practically all in the form of snow, was generally light in amount. The mild weather in the western portion of the State was favorable for range stock, but the snow interfered considerably with grazing over northern sections.

MARCH.—With the exception of the storm of the 14th to 16th, inclusive, the weather was generally pleasant and uneventful. Low temperature prevailed during the first week, but readings below zero were not generally recorded thereafter. The precipitation averaged near the normal, but the distribution was uneven, the greater portion occurring on the 15th and 16th. The storm of the 14th to 16th, inclusive, was one of the worst blizzards of record in the State, and resulted in heavy loss of human lives and of livestock, most of which occurred in the western portion of the section.

APRIL.—The month opened with a cold wave, and the temperature dropped to zero or below at most stations from the 2d to the 6th, inclusive, establishing new low records for April at many stations. After the first week there was considerable moderation, but the temperature remained below normal throughout the month. The day temperatures were uniformly low, as shown by the fact that the highest temperature reported was but 63°. The precipitation during two decades was scant. From the 20th to the 25th precipitation was general over the State, and the bulk of the precipitation for the month occurred between these dates. Farm work was delayed by frozen and wet fields, pastures were slow in starting, and livestock suffered for lack of forage.

MAY.—The weather was generally pleasant and favorable for outdoor work, and farm work advanced rapidly. The temperature averaged slightly above the normal and was very uniform throughout the month. Freezing temperatures were not generally recorded after the 1st, and at seven stations the freezing point was not reached. The day temperatures were also moderate. The precipitation was generally below the normal, but well distributed throughout the month in the form of light showers. Spring grain seeding, which was greatly delayed by inclement weather during April, made rapid advancement. Pastures and ranges were in good condition at the close of the month, and livestock showed marked improvement.

JUNE.—Nearly normal weather prevailed throughout the month, and as a result of these favorable conditions crops and other vegetation made excellent growth generally. Scattered frosts occurred during the first few days, but no damage was reported. The precipitation averaged slightly above the normal

[Concluded on page 101.]

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing. [b], 2 days missing, etc.

[Continued from page 97.]

and was well distributed both geographically and thoughout the month. Some sections of the northern and western parts of the State reported much damage from grasshoppers. A severe wind storm (tornado) passed over portions of Cass County and did considerable damage, including the killing of one man and the injuring of four other persons.

July.—Cool weather characterized the opening of the month, and this condition prevailed during the first decade. Higher temperature followed and continued to the end of the month. The weather during the first part of the month was beneficial to all crops, especially to the late sown grains. The higher temperatures which followed ripened the grain rapidly, too rapidly in some sections, but was especially beneficial to corn, of which there is a greatly increased acreage this year. Considerable damage to potatoes from insects was reported, the hot weather being favorable for their propagation. Nearly normal precipitation occurred. Scattered hailstorms did considerable damage.

August.—The month was warm and dry, with abundant sunshine. The daily range of temperature was unusually wide, with high day temperatures and cool nights. There was a deficiency of precipitation, especially during the fore part of the month, when most needed. The drought caused serious deterioration to corn, flax, potatoes and late grains. Reports of damage from rust were received from many parts of the State. Farm work progressed rapidly under favorable conditions, and as a result the greater portion of grain harvesting was completed.

September.—Generally seasonable weather prevailed. There was a slight excess in temperature, due chiefly to warm nights. Killing frosts were not reported until the cold period which began on the 28th. At some northeastern stations no killing frosts occurred. The rainfall was generally light during the first 17 days. A rainy period began on the 18th and lasted until the 26th; fair weather prevailed until the close of the month. Although delayed by rains in some sections, threshing made good progress generally. The corn crop improved generally, and was well matured before the advent of frost.

October.—High temperature characterized the weather of the month. The first week was especially warm, temperatures of 90° and above being recorded at many stations on the 5th, 6th and 7th. The precipitation was light, only a few stations in extreme western and in the extreme southeastern portions reporting more than an inch, while seven stations in the east-central portion reported no precipitation or merely traces. Threshing was practically finished at the close of the month.

November.—With the exception of the cold week beginning on the 8th, the temperature averaged considerably above the normal. The precipitation was generally light, but there was more than the usual cloudiness. A cold wave occurred on the 9th, and low temperatures continued until the 15th, and during this period sub-zero temperatures were recorded at most stations. During the cold period (8th to 15th) the ice in the Missouri River formed to a thickness ranging from 6 to 10 inches, stopping navigation on the 11th. During the latter part of the month the high temperatures caused the snows to melt and the ice to soften and break, causing serious damage at Bismarck, where a new vehicle bridge is being erected.

December.—The first 16 days were warm, with day temperatures above freezing and with minimum temperatures above zero. A cold period followed and continued until the 28th, when a rapid rise occurred and prevailed to the close of the month. There was a general deficiency of precipitation, the average being but 60 per cent of the normal. Navigation on the Missouri River did not close until the 16th, the latest of record.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., JANUARY, 1921. No. 1

GENERAL SUMMARY.

The month was unusually warm, but the mean temperature, 15.9°, was not record-breaking, as during the past 28 years there have been two warmer months of the same name, January, 1908, with a mean of 17.0°, and January, 1919, with a mean of 18.0°. There were no severe temperature changes during the month, aside from the cold wave of the 16th, which was of short duration. While there was an average difference of 17° between the extreme northeastern and the extreme southwestern portions of the State, this was but slightly in excess of the usual winter difference between these two sections. There was little precipitation of consequence during the month in most sections, the totals exceeding one-half inch at only five stations. There were scattered flurries or light falls of snow on several days during the first half of the month, while the falls during the second half were mostly confined to the 19th and the 29th to 31st, inclusive. Conditions were therefore favorable for all outdoor activities, and livestock on the ranges were favorably affected and in good condition generally. —E. G. L.

TEMPERATURE.

The mean temperature for the State was 15.9°, or 11.0° above the normal, and 13.2° higher than the mean for January, 1920. The highest mean reported was 25.4° at Marmarth, Slope County; the lowest was 7.8° at Langdon, Cavalier County. The highest temperature reported was 58° at Dickinson, Stark County, on the 15th; the lowest was -31° at Bottineau, Bottineau County, on the 11th. The greatest monthly range was 72° at Beach, Golden Valley County, and Dickinson, Stark County; the least was 52° at Howard and Williston, Williams County, and Melville, Foster County. The greatest daily range was 54° at Eckman, Bottineau County, on the 12th.

PRECIPITATION.

The average precipitation for the State was 0.24 inch, or 0.30 inch less than the normal, and 0.69 inch less than the average for January, 1920. The greatest monthly amount reported was 0.80 inch at Walhalla, Pembina County; the least was a trace at Hansboro, Towner County, Lamoine, Kidder County, and Maddock, Benson County. The greatest amount recorded in any twenty-four consecutive hours was 0.43 inch at Fessenden, Wells County, on the 19th. The average number of days with 0.01 inch or more of precipitation was 2. The average snowfall was 2.5 inches.

AURORAS.

Auroras were observed at Towner on the 6th, at Eckman and Foxholm on the 9th, at Eckman on the 11th, at Foxholm on the 12th, at Valley City on the 17th, at Ashley and Valley City on the 18th, and at Valley City on the 24th.

ERRATA, NOVEMBER, 1920.

Page 81: Greatest 24-hour precipitation at Cooperstown should be 0.45 inch. Mean temperature and departure at Eckman should be 26.8°, +0.5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Orange, Thunder Hawk, S D; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for January, 1921.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., FEBRUARY, 1921. No. 2

GENERAL SUMMARY.

The month was the warmest February of record since the State climatological service was begun in 1892. The mean temperature, 19.9°, is 2.5° higher than the mean for February, 1915, which previously held the record for warmth. The month, however, was not continuously warm; during the first and third weeks the temperature was near normal and readings below zero were of frequent occurrence, but the second and fourth weeks were exceptionally warm. Geographically the mean temperature varied from 10° in the extreme northeastern portion to 28° in the extreme southwestern portion, which is somewhat greater than the normal difference due to the greater excess above normal in the western portion. The precipitation was less than normal in most sections, but was greater than normal in the extreme northeastern portion, where amounts over one inch were recorded at three stations. There was a general fall of snow on the 3d and 4th and on the 15th and 16th, but only scattered falls occurred on other dates. The snowfall of the 15th and 16th was accompanied by a cold wave and high winds. Considerable field work was accomplished on farms during the warm periods, and some spring wheat was sown. Livestock benefited by the mild weather, and much feed was saved by grazing at a time when feeding is usually necessary.

TEMPERATURE.

The mean temperature for the State was 19.9°, or 12.0° above the normal, and 7.4° higher than the mean for February, 1920. The highest mean reported was 28.3° at Amidon, Slope County, and at Bowman, Bowman County; the lowest was 10.4° at Pembina, Pembina County. The highest temperature reported was 64° at Beach, Golden Valley County, on the 12th; the lowest was −33° at Langdon, Cavalier County, on the 19th. The greatest monthly range was 84° at Eckman, Bottineau County; the least was 50° at Pembina, Pembina County. The greatest daily range was 56° at Westhope, Bottineau County, on the 19th.

PRECIPITATION.

The average precipitation for the State was 0.39 inch, or 0.10 inch less than the normal, and 0.09 inch less than the average for February, 1920. The greatest monthly amount reported was 1.30 inches at Walhalla, Pembina County; the least was a trace at Amidon, Slope County, and Parshall, Mountrail County. The greatest amount recorded in any twenty-four consecutive hours was 0.70 inch at Maddock, Benson County, on the 16th. The average number of days with 0.01 inch or more of precipitation was 3. The average snowfall was 3.8 inches.

AURORAS.

Auroras were observed at Donnybrook and Foxholm on the 5th, at Donnybrook on the 6th, at New England on the 18th, 19th and 20th, and at Eckman, Foxholm and Howard on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXX. Bismarck, N. D., March, 1921. No. 3

GENERAL SUMMARY.

March averaged slightly warmer and wetter than usual, but there was considerably more than the usual cloudiness. The month opened with a warm week, followed by a week of moderately cold weather. During the latter half of the month the temperature was near normal, excepting some low temperatures on the 21st, 27th and 28th. The monthly means varied from near 20° in the extreme northeastern portion to near 30° along the southern border; they were near or slightly below normal in the Red River Valley, while at several south-central stations the means were from 5° to 7° above normal. The distribution of precipitation over the State was very irregular, but generally the amounts in the northern border counties were less than one-half inch, and more than one inch over the southern half of the State, with the larger amounts in the central and southeastern portions. Precipitation, which was practically all in the form of snow, was frequent during the first half of the month. During the second half there were general falls on the 20th and 26th, and in the southeastern portion on the 23d and 24th. Thunderstorms occurred at many stations on the evening of the 14th, which is an unusual occurrence so early in the season. Some field work was accomplished on farms during the warmer periods, but very little wheat seeding was done.

TEMPERATURE.

The mean temperature for the State was 25.2°, or 2.6° above he normal, and 2.8° higher than the mean for March, 1920. The highest mean reported was 32.4° at Bowman, Bowman County; the lowest was 17.4° at Langdon, Cavalier County. The highest temperature reported was 75° at Ellendale, Dickey County, on the 18th; the lowest was -22° at Fessenden, Wells County, on the 12th. The greatest monthly range was 84° at Napoleon, Logan County; the least was 59° at Lisbon, Ransom County. The greatest daily range was 61° at Edgeley, LaMoure County, on the 26th.

PRECIPITATION.

The average precipitation for the State was 1.00 inch, or 0.17 inch above the normal, and 0.21 inch more than the average for March, 1920. The greatest monthly amount reported was 2.69 inches at Fullerton, Dickey County; the least was 0.04 inch at Taylor, Stark County. The greatest amount recorded in any twenty-four consecutive hours was 1.20 inches t Turtle Lake, McLean County, on the 10th. The average umber of days with 0.01 inch or more of precipitation was 6. The average snowfall was 9.1 inches.

AURORAS.

Auroras were observed at Valley City on the 12th; at Amidon nd Mandan on the 14th; at Ashley, Bismarck, Foxholm, Moorhead and Skaar on the 15th; at Pettibone on the 16th; at Valley City on the 21st; at Foxholm on the 24th; at Valley City on the 25th; at Foxholm on the 26th; at Ellendale and Foxholm on the 28th, and at Ellendale on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for March, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., APRIL, 1921. No. 4

GENERAL SUMMARY.

The temperature was generally moderate during the month, and the means were near the normal at all stations. High temperatures occurred on the 2d, 3d and 4th, followed by a cool period with general rain or snow from the 5th to the 9th, inclusive. Fair weather with moderate temperatures then prevailed until the 20th, which marked the beginning of another rainy period that lasted, with only short interruptions, until the end of the month. The precipitation was about evenly distributed between the two periods mentioned above. The falls during the first period were mostly in the form of snow, while those in the second were mostly in the form of rain, excepting the heavy snow which fell in the extreme northwestern portion on the 30th. The precipitation was well distributed, the totals being more than two inches over the greater portion of the State, and over three inches at four stations. The extreme southwestern portion received the least, the greater portion of five counties recording less than one inch. As the precipitation came mostly in small amounts, farm work was not seriously interfered with, and wheat seeding made excellent progress. Grass made a good start and afforded much feed for stock. —E. G. L.

TEMPERATURE.

The mean temperature for the State was 41.1°, or 0.6° below the normal, and 9.0° higher than the mean for April, 1920. The highest mean reported was 48.2° at Lisbon, Ransom County; the lowest was 31.6° at Pembina, Pembina County. The highest temperature reported was 91° at Edgeley, LaMoure County, on the 3d; the lowest was 1° at Willow City, Bottineau County, on the 8th. The greatest monthly range was 79° at Edgeley, LaMoure County; the least was 50° at Grafton, Walsh County. The greatest daily range was 62° at Hettinger, Adams County, on the 18th.

PRECIPITATION.

The average precipitation for the State was 1.81 inches, or 0.43 inch above the normal, and 0.98 inch more than the average for April, 1920. The greatest monthly amount reported was 4.72 inches at Ashley, McIntosh County; the least was 0.27 inch at Hettinger, Adams County. The greatest amount recorded in any 24 consecutive hours was 2.00 inches at Howard, Williams County, on the 30th. The average snowfall was 3.8 inches. The average number of days with 0.01 inch or more of precipitation was 7.

AURORAS.

Auroras were observed at Devils Lake, Eckman, Ellendale, Foxholm, Fullerton, Howard and Skaar on the 9th; at Foxholm, Fullerton, Howard, McLeod, Marmarth and Valley City on the 10th; at Eckman, Foxholm and Valley City on the 11th; at Fessenden, Foxholm, Howard, Napoleon and Valley City on the 12th; at Valley City on the 13th; at Arnegard, Eckman, Napoleon and Valley City on the 14th; at Donnybrook and Valley City on the 15th and 16th, and at Foxholm on the 28th and 29th.

ERRATA, FEBRUARY, 1921.

Page 6: Greatest 24-hour precipitation at Eckman should be .13, and at Grafton, .37. Highest temperature at Napoleon should be 56° on the 15th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for April, 1921.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXX. Bismarck, N. D., May, 1921. No. 5

GENERAL SUMMARY.

Weather favorable for outdoor work and for the germination and growth of farm products prevailed in all parts of the State. The temperature averaged slightly above the normal, due generally to high day temperatures. The nights, however, were generally cool, freezing temperatures being recorded generally during the first week, and in many parts of the State during the middle of the month. No damage, however, from frosts was reported. The precipitation, which practically consisted entirely of rain, averaged slightly below normal. The distribution of precipitation was quite uniform, both geographically and throughout the month. The seeding of small grains made rapid progress during the early part of the month, germination was satisfactory, and at the close of the month both condition and color were excellent. While the weather was not quite so favorable for corn, the condition of this crop at the close of the month was also excellent, although a few reports of damage from cut worms were received. Flax seeding was well under way when the month closed. Ranges, pastures and meadows were in excellent condition.

TEMPERATURE.

The mean temperature for the State was 53.8°, or 1.2° above the normal, and 0.1° lower than the mean for May, 1920. The highest mean reported was 57.0° at Berthold Agency, McLean County; the lowest was 49.1° at Bottineau, Bottineau County. The highest temperature reported was 90° at Fessenden, Wells County, and Wahpeton, Richland County, on the 21st; the lowest was 16° at Hansboro, Towner County, on the 3d. The greatest monthly range of temperature was 69° at Fessenden, Wells County, and Hansboro, Towner County; the least was 52° at Steele, Kidder County. The greatest daily range was 52° at Minto, Walsh County, on the 18th.

PRECIPITATION.

The average precipitation for the State was 2.46 inches, or 0.09 inch below the normal, and 0.72 inch more than the average for May, 1920. The greatest monthly amount reported was 5.62 inches at Epping, Williams County; the least was 1.03 inches at Devils Lake, Ramsey County. The greatest amount recorded in any 24 consecutive hours was 2.54 inches at Dunseith on the 20th. The average snowfall was a trace. The average number of days with 0.01 inch or more of precipitation was 9.

AURORAS.

Auroras were observed at Berthold Agency, Ellendale, Fessenden, Foxholm, Howard and Moorhead on the 3d; at Bowman, Grand Forks and Wahpeton on the 4th; at Foxholm on the 11th; at Devils Lake, Ellendale, Foxholm, Grand Forks and Valley City on the 13th; at Amidon, Bismarck, Devils Lake, Ellendale, Fessenden, Fullerton, Grand Forks, Skaar, Valley City, Williston and Moorhead on the 14th; at Bowman, Crosby, Devils Lake, Ellendale, Fessenden, Foxholm, Fullerton, Grand Forks, New England, Valley City, Wahpeton, Westhope and Moorhead on the 15th; at Crosby, Eckman, McLeod, Valley City and Wahpeton on the 16th; at Foxholm on the 20th; at Bowman and Valley City on the 21st, and at Grand Forks, Valley City and Moorhead on the 22d.

ERRATA, APRIL, 1921.

Page 14: Total precipitation at Energy should be 1.61 inches, and at Park River, 1.78 inches.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for May, 1921.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXX. Bismarck, N. D., June, 1921. No. 6

GENERAL SUMMARY.

The weather during June was the warmest of record for that month, with but one exception, since the Climatological Service was established in the State in 1892. While the precipitation for the month was nearly the normal, the geographical distribution was so uneven that crop conditions at the close of the month varied greatly in closely situated localities. Crop conditions were never more promising than on June 15th, but the high temperatures and lack of precipitation caused rapid deterioration in many parts of the State, while high temperatures following heavy showers in other sections tended to cause damage to crops from stem rust. Grasshoppers were numerous, especially in the northern part of the State, but damage from that source was small. Serious damage occurred in many parts of the State from hail and high winds. Pastures, ranges, meadows, gardens, potatoes and late sown grains, including flax, were in need of more moisture at the close of the month, especially in the central and southwestern portions.

TEMPERATURE.

The mean temperature for the State was 68.2°, or 5.4° above the normal, and 6.0° higher than the mean for June, 1920. The highest mean reported was 72.0° at Linton, Emmons County; the lowest was 64.5° at Langdon, Cavalier County. The highest temperature reported was 108° at Mandan and New Salem, both in Morton County, on the 30th; the lowest was 30° at Hansboro, Towner County, on the 3d. The greatest monthly range of temperature was 73° at Napoleon, Logan County; the least was 50° at Arnegard, McKenzie County. The greatest daily range was 56° at Linton, Emmons County, on the 11th.

PRECIPITATION.

The average precipitation for the State was 3.51 inches, or 0.01 inch above the normal, and 0.11 inch less than the average for June, 1920. The greatest monthly amount reported was 7.65 inches at Powers Lake, Burke County; the least was 0.75 inch at Linton, Emmons County. The greatest amount recorded in any 24 consecutive hours was 3.37 inches at Berthold Agency, McLean County, on the 18th. The average number of days with 0.01 inch or more of precipitation was 9. The distribution of precipitation throughout the month was quite uniform, although particularly showery periods were the st, 5-6th, 15-20th, 26th and 29th.

AURORAS.

Auroras were observed at Grand Forks on the 4th; at Howard on the 5th; at Bowman, Ellendale and Foxholm on the th; at Crosby and Foxholm on the 10th; at Crosby on the 2th, and at Grand Forks on the 21st and 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for June, 1921.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., JULY, 1921. No. 7

GENERAL SUMMARY.

The excessive heat of June continued through July. The mean for July, 71.4°, has been exceeded only three times in the past 30 years, being a fraction of a degree higher in 1894 and 1914 and nearly two degrees higher in 1916. The heat was greatest in the south-central portion, where new high temperature records were established at a few stations. The rainfall averaged almost half an inch above normal, but was deficient over the southwestern and central portions. The heaviest falls occurred in the northeastern portion, the monthly total reaching ten inches at Larimore. Many severe windstorms occurred during the month, and there was much damage to crops from hail. The most destructive storm occurred on the 2d, doing the most damage in eastern Dickey County, but also much damage in the adjoining counties to the north and east, and in South Dakota. The damage to buildings by this storm is estimated at over half a million dollars in the North Dakota area. Damaging winds occurred on the 16th in Burleigh, Kidder, Stutsman, Logan and Richland Counties, at Bowman, Bowman County, on the 1st and 25th, and at Pettibone, Kidder County, on the 9th. The heat was unfavorable for most crops in all sections, and drought damage was severe in the southwestern and central portions. Wheat suffered from stem rust in the eastern portion, and the heads were not well filled generally on account of rapid ripening. The grain harvest was fullly ten days earlier than usual, and was well under way at the end of the month.

E. G. L.

TEMPERATURE.

The mean temperature for the State was 71.4°, or 3.9° above the normal, and 3.1° higher than the mean for July, 1920. The highest mean reported was 75.9° at Linton, Emmons County; the lowest was 67.3° at Turtle Lake, McLean County. The highest temperature reported was 110° at Carson, Grant County, and at Mandan, Morton County, on the 9th; the lowest was 35° at Beach, Golden Valley County, on the 30th, and at Turtle Lake, McLean County, on the 31st. The greatest monthly range of temperature was 71° at Turtle Lake, McLean County; the least was 44° at Larimore, Grand Forks County, and at Park River, Walsh County. The greatest daily range was 52° at Eckman, Bottineau County, on the 20th, and at Hettinger, Adams County, on the 8th.

PRECIPITATION.

The average precipitation for the State was 3.07 inches, or 0.46 inch above the normal, and 0.91 inch more than the average for July, 1920. The greatest monthly amount reported was 10.00 inches at Larimore, Grand Forks County; the least was 0.37 inch at Taylor, Stark County. The greatest amount recorded in any 24 consecutive hours was 6.03 inches at Larimore, Grand Forks County, on the 3d. The average number of days with 0.01 inch or more of precipitation was 7.

AURORAS.

Auroras were observed at Westhope on the 13th and 14th, at Foxholm on the 16th, at Berthold Agency, Devils Lake and Westhope on the 29th, and at Foxholm and Skaar on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section means.

Reference letters, ᵃ, ᵇ, ᶜ, appearing in the table indicate number of days missing; for example, ᵇ represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for July, 1921.

UNIVERSITY OF ILLINOIS LIB

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXX. Bismarck, N. D., August, 1921. No. 8

GENERAL SUMMARY.

The temperature and precipitation for the month averaged nearly the normal, the former being slightly above, and the latter slightly below, the normal. The first decade was the driest, and during this period harvesting of small grains was practically completed. The ground, however, was mostly too dry for fall plowing, and late planted potatoes suffered. The second decade was the coolest of the month, and frequent showers, in many instances quite heavy, relieved the droughty conditions. The third decade was the warmest as well as the wettest, and at the close of the month the ground was generally in excellent condition. Threshing, however, was delayed considerably during the last decade, especially in the eastern portion of the State. No frosts or severe storms were reported.

TEMPERATURE.

The mean temperature for the State was 67.2°, or 1.8° above the normal, and 1.6° lower than the mean for August, 1920. The highest mean reported was 72.8° at Bowman, Bowman County; the lowest was 63.2° at Minot, Ward County. The highest temperature reported was 108° at Carson, Grant County, on the 31st; the lowest was 31° at Minot, Ward County, on the 20th. The greatest monthly range of temperature was 72° at Minot, Ward County; the least was 51° at Hillsboro, Traill County. The greatest daily range was 58° at Minot, Ward County, on the 21st, and at Skaar, McKenzie County, on the 8th.

PRECIPITATION.

The average precipitation for the State was 1.99 inches, or 0.29 inch below the normal, and 0.43 inch more than the average for August, 1920. The greatest monthly amount reported was 6.64 inches at Ashley, McIntosh County; the least was 0.03 inch at Skaar, McKenzie County. The greatest amount recorded in any 24 consecutive hours was 4.53 inches at Devils Lake, Ramsey County, on the 25th. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS.

Auroras were observed at Foxholm on the 2d, 7th and 30th; at Marmarth on the 4th; at Ellendale on the 5th and 30th; at Eckman on the 22d and 30th; at Arnegard and Grand Forks on the 29th, and at Pettibone and Skaar on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for August, 1921.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., SEPTEMBER, 1921. No. 9

GENERAL SUMMARY.

From a temperature standpoint the weather during September throughout North Dakota was nearly normal, the mean varying but 0.6° from the normal. There was, however, an excess of precipitation in nearly all parts of the State. While this excessive precipitation delayed threshing considerably, it was very beneficial for fall plowing, and for the seeding and the germination of winter rye and wheat. The month opened warm and dry, a condition which prevailed until the close of the 7th. From the 8th to the close of the 20th, precipitation in the form of general rains or local showers occurred, after which the weather was again generally fair. A few light frosts were recorded on the 10th, but killing frosts were not frequently reported until the 25th, and in some instances not until the 30th. As a rule the 1st was the warmest day and the 30th the coldest. Corn ripened rapidly during the first decade, and was out of danger of frosts before they occurred.

TEMPERATURE.

The mean temperature for the State was 57.0°, or 0.6° above the normal, and 2.0° lower than the mean for September, 1920. The highest mean reported was 60.6° at Jamestown, Stutsman County; the lowest was 52.8° at Bowbells, Burke County. The highest temperature reported was 101° at Hettinger, Adams County, on the 1st; the lowest was 25° at Hettinger, Adams County, on the 30th. The greatest monthly range of temperature was 76° at Hettinger, Adams County; the least was 49° at Williston, Williams County. The greatest daily range was 53° at Berthold Agency, McLean County, on the 2d, and at McKinney, Renville County, on the 24th.

PRECIPITATION.

The average precipitation for the State was 3.30 inches, or .66 inches above the normal, and 1.04 inches more than the av- rage for September, 1920. The greatest monthly amount reported was 6.83 inches at Pembina, Pembina County; the east was 1.37 inches at Mott, Hettinger County. The greatest mount recorded in any 24 consecutive hours was 2.75 inches t Jamestown, Stutsman County, on the 8th. The average number of days with 0.01 inch or more of precipitation was 12. Traces of snow occurred at six stations, and 0.7 inch at one tation.

AURORAS.

Auroras were observed at Bismarck, Foxholm, Garrison, Pet- ibone and Skaar on the 1st; at Crosby on the 2d; at Ellendale, Foxholm, Fullerton, Larimore, Linton and McLeod on the 3d; t Wahpeton on the 4th; at Skaar on the 5th; at Wahpeton on he 9th; at Crosby on the 27th; at Bismarck, Eckman, Fes- enden, Foxholm and Linton on the 28th; at Howard and Steele on the 29th, and at Eckman, Ellendale, Foxholm, How- rd and Steele on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for September, 1921.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., OCTOBER, 1921. No. 10

GENERAL SUMMARY.

The weather throughout the month was favorable for outdoor work, and field operations were advanced far ahead of the seasonal average in consequence. Due to both favorable soil and weather conditions, there was more than the usual amount of fall plowing done, although this activity was stopped in some sections, due to dryness of the soil. The seeding of winter rye and wheat was generally completed during the first and second decades, and at the close of the month both crops presented both good stand and color. With the exception of a few fields, corn-husking was completed during the month. There were three short stormy periods, and practically all of the precipitation occurred at those times; from the 6th to the 10th, inclusive, the 17th-18th, and from the 25th to the 28th, inclusive. During the last half of the month there were heavy shipments of both grain and livestock.

TEMPERATURE.

The mean temperature for the State was 47.3°, or 3.5° above the normal, and 2.0° lower than the mean for October, 1920. The highest mean reported was 49.8° at Jamestown, Stutsman County; the lowest was 44.3° at Bowbells, Burke County. The highest temperature reported was 88° at Skaar, McKenzie County, on the 20th; the lowest was 16° at Pettibone, Kidder County, on the 11th, and at Marmarth, Slope County, on the 27th. The greatest monthly range of temperature was 70° at Skaar, McKenzie County; the least was 45° at Melville, Foster County. The greatest daily range was 60° at Fessenden, Wells County, on the 4th.

PRECIPITATION.

The average precipitation for the State was 0.73 inch, or 0.27 inch below the normal, and 0.27 inch more than the average for October, 1920. The greatest monthly amount reported was 2.75 inches at Jamestown, Stutsman County; there was none at Parshall, Mountrail County. The greatest amount recorded in any 24 consecutive hours was 1.55 inches at Linton, Emmons County, on the 26th. The average number of days with 0.01 inch or more of precipitation was 4. The greatest depth of snowfall reported was 3.0 inches at Grand Forks, Grand Forks County.

AURORAS.

Auroras were observed at Howard, Marmarth and Pettibone on the 1st; at Foxholm and Valley City on the 4th; at McLeod on the 5th; at Grand Forks on the 7th; at Grand Forks, Linton and Skaar on the 8th; at Eckman on the 10th; at Arnegard, Donnybrook, Foxholm and Marmarth on the 11th; at Donnybrook and Foxholm on the 20th; at Howard on the 26th; at Ellendale, Foxholm and Howard on the 28th; at Ellendale on the 29th; at Foxholm on the 30th, and at Carson, Donnybrook, Eckman and Foxholm on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXX. Bismarck, N. D., November, 1921. No. 11

GENERAL SUMMARY.

Changeable weather as regards temperature prevailed throughout the State during the month. The weather at the opening of the month was above normal, a condition which prevailed during the first decade. The temperature during the second decade and during the first half of the third decade was below the normal. The month closed with generally mild temperature. There was practically no precipitation over the State during the first six days. From the 7th to the 18th, snow flurries were frequent in all sections, the snowfall being fairly heavy in some sections. From the 19th to the close of the month scattered snows occurred. The weather, taken as a whole, was favorable for outdoor work and for livestock.

TEMPERATURE.

The mean temperature for the State was 21.0°, or 5.6° below the normal, and 7.0° lower than the mean for November, 1920. The highest mean reported was 28.2° at Beach, Golden Valley County; the lowest was 16.2° at Hansboro, Towner County. The highest temperature reported was 69° at Bowman, Bowman County, on the 3d; the lowest was -30° at Howard, Divide County, on the 19th. The greatest monthly range of temperature was 92° at Berthold Agency, McLean County; the least was 63° at Lisbon, Ransom County. The greatest daily range was 60° at Minot, Ward County, on the 28th.

PRECIPITATION.

The average precipitation for the State was 0.68 inch, or 0.10 inch above the normal, and 0.31 inch more than the average for November, 1920. The greatest monthly amount reported was 1.52 inches at Amidon, Slope County; the least was 0.10 inch at Lamoine, Kidder County. The greatest amount ecorded in any 24 consecutive hours was 1.00 inch at Howard, Divide County, on the 16th. The average number of days with 0.01 inch or more of precipitation was 5. The average snowfall was 6.3 inches.

AURORAS.

Auroras were observed at Arnegard on the 4th; at Bismarck, Dickinson and McLeod on the 5th; at Howard on the 26th, and at McLeod on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for November, 1921.

UNNT

ITY OF ILL 1922

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., DECEMBER, 1921. No. 12

GENERAL SUMMARY.

The month opened with mild temperature, a condition that prevailed during the first and second decades, and during this period the snow covering rapidly disappeared. This allowed outdoor work, which principally consisted of marketing of hay and grain and the feeding of livestock, to progress under favorable circumstances. In most parts of the State there was much grazing of livestock on ranges, pastures and harvested fields. During this period the ice in the Missouri River broke up at many points in North Dakota and Montana, but no damage resulted. During the last decade there was a change to decidedly colder, the minimum for the month generally being recorded on the 20th. Practically no precipitation occurred during the first decade. Light scattered snows occurred from the 15th to the 22d, and again on the 30th-31st.

TEMPERATURE.

The mean temperature for the State was 16.5°, or 3.5° above the normal, and 1.3° higher than the mean for December, 1920. The highest mean reported was 19.9° at Edgeley, LaMoure County; the lowest was 10.7° at Pembina, Pembina County. The highest temperature reported was 59° at Edgeley, LaMoure County, on the 14th; the lowest was -33° at Pettibone, Kidder County, on the 24th. The greatest monthly range of temperature was 83° at Skaar, McKenzie County; the least was 64° at Cando, Towner County, and other stations. The greatest daily range was 49° at Minot, Ward County, on the 29th.

PRECIPITATION.

The average precipitation for the State was 0.41 inch, or 0.13 inch below the normal, and 0.09 inch more than the average for December, 1920. The greatest monthly amount reported was 1.60 inches at Amenia, Cass County; the least was at Donnybrook, Ward County, McKinney, Renville County, New England, Hettinger County, and Towner, McHenry County. The greatest amount recorded in any 24 consecutive hours was 0.60 inch at Amenia, Cass County, on the 15th. The average number of days with 0.01 inch or more of precipitation was 4. The average depth of snowfall was 3.9 inches.

AURORAS.

Auroras were observed at Donnybrook, Grand Forks and McLeod on the 2d; at Eckman on the 12th; at McLeod on the 20th; at Mandan on the 21st; at Bismarck, Bowman, Ellendale, Foxholm, Howard, McKinney, McLeod and Marmarth on the 22d; at Ellendale, Foxholm, Howard, McLeod, Park River, Pettibone and Valley City on the 23d; at Bowman, Eckman, Foxholm, Howard, Park River and Valley City on the 26th; at Arnegard, Bowman, Eckman, Howard, McLeod, Park River, Steele and Valley City on the 27th; at Arnegard, Berthold Agency, Eckman, Foxholm, Fullerton, Grand Forks, McLeod, Marmarth, Park River, Skaar and Steele on the 28th, and at Foxholm, Pettibone and Steele on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for December, 1921.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXX. BISMARCK, N. D., ANNUAL, 1921. No. 13

GENERAL SUMMARY.

Owing to the fact that there was a deficiency in precipitation during the last five months of 1920 over North Dakota, taken as a whole, much interest was naturally felt in the precipitation conditions during the opening months of 1921. The conditions during January were favorable for comfort, for livestock and for outdoor work, for the temperature was very mild, but the precipitation was deficient. This condition prevailed during February also. March was more favorable from a crop standpoint, but the excess of precipitation was slight. April was an improvement over March and, while there was still a decided deficiency in subsoil moisture, conditions at the close of the month were favorable. There was a deficiency in precipitation in May and a slight excess in temperature, but crop conditions were very favorable at the end of the month. The high temperature during June, with normal precipitation, followed by excessively high temperature during July, damaged crops seriously, especially in the central and southwestern portions of the State. August produced temperature slightly above, and precipitation slightly below, the normal. The heavy precipitation during September, while it helped fall plowing and some late crops, came too late to affect small grains.

The mean annual temperature was 42.0°, or 3.2° above the normal, and 2.5° higher than the mean for 1920. The highest mean annual temperature reported was 45.6° at Hettinger, Adams County; the lowest was 37.5° at Langdon, Cavalier County. The highest temperature reported was 110° at Carson, Grant County, on July 9th; the lowest was -33° at Langdon, Cavalier County, on February 19th, and at Pettibone, Kidder County, on December 24th. The temperature averaged above the normal during all months of the year, except April and November. The mean annual temperature is the highest of record during the thirty years since the Climatological Service was established in the State. The nearest approach was 41.0° in 1900 and again in 1910. The highest temperature ever recorded in the State was 124° at Medora, Billings County, on September 3, 1912; the lowest was -56° at Goodall, McKenzie County, on January 12, 1916.

The average precipitation for the State was 19.59 inches, or 1.65 inches above the normal, and 4.25 inches greater than the average for 1920. The greatest annual precipitation reported was 33.78 inches at Larimore, Grand Forks County; the least was 9.22 inches at Hettinger, Adams County. The greatest monthly amount reported was 10.00 inches at Larimore, Grand Forks County, in July; there was no precipitation at Bowbells, Burke County, in December, and at Parshall, Mountrail County, in October. The precipitation averaged above the normal during six months, and below the normal during six months. During the past 30 years there have been 5 wetter and 24 drier years. The heaviest annual precipitation ever recorded in the State was 23.57 inches in 1896; the least was 10.92 inches in 1917. The average snowfall for the State was 29.4 inches. The average number of days with 0.01 inch or more of precipitation was 74. There were 158 clear days, 111 partly cloudy, and 96 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—The weather during January was unusually warm, there having been but two warmer Januarys in the climatological history of the State. Except for the cold wave on the 16th, there were no severe temperature changes. There was little precipitation during the month, amounts in excess of one-half inch being recorded at but five stations. Scattered snow flurries occurred at several stations during the first half of the month, while during the second half the precipitation was nearly all confined to the 19th, and from the 29th to the 31st, inclusive.

FEBRUARY.—The weather was the warmest of record for February since the Climatological Service was established in 1892. The month, however, was not continuously warm; during the first and third decades the temperature was near the normal, and readings below zero were of frequent occurrence. The second decade was exceptionally warm. The precipitation was less than the normal at most stations, but was considerably above the normal in the northeast portion, where amounts in excess of one inch were recorded at three stations. Much feeding of livestock was saved by mild temperature, and some spring wheat was sown.

MARCH.—March averaged slightly warmer and wetter than the normal, but there was more than the usual cloudiness. The first week was warm, but was followed by colder weather. During the latter half of the month the temperature was nearly normal, except some low temperatures on the 21st, 27th and 28th. The distribution of precipitation over the State was very irregular, but generally along the northern border the amounts were less than one-half inch, more than one-half inch over the southern half of the State, with the larger amounts in the central and southeastern portions. Thunderstorms were frequent on the evening of the 14th, which is an unusual occurrence at that season of the year. Farm work did not progress very satisfactorily.

APRIL.—The temperature was generally moderate during the month, and the means were near the normal at all stations. High temperatures occurred on the 2d, 3d and 4th, followed by a cool period that continued until the 9th. Fair weather, with moderate temperature, prevailed from the 10th to the 20th, inclusive. The precipitation was well distributed geographically, the totals being more than two inches over the greater portion of the State, and over three inches at four stations. Farm work made good progress, as the precipitation generally occurred in small amounts.

MAY.—The weather was favorable for outdoor work, and for the germination and growth of farm products in all parts of the State. The temperature averaged slightly above the normal, due generally to high day temperatures. The nights, however, were generally cool, freezing temperatures being recorded generally during the first decade, and in many parts of the State during the middle of the month. The precipitation averaged slightly below the normal. The distribution was quite uniform, both geographically and throughout the month. The seeding of small grains made rapid progress during the early part of the month, germination was generally satisfactory, and at the close of the month both condition and color were excellent. While the weather was not quite so favorable for corn, the condition was reported excellent at the end of the month. Ranges, pastures, meadows and livestock were in excellent condition.

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 19.]

JUNE.—The weather during June was, with but one excep-on, the warmest of record for that month. While the precipi-tion was nearly the normal, the distribution was so uneven iat crop conditions at the close of the month varied greatly in osely situated localities. Up to the 15th, crop conditions never ppeared to better advantage, but the high temperature and ck of precipitation caused rapid deterioration in many parts of le State, while high temperature and heavy showers in other ctions tended to cause damage from stem rust. Hail and high inds did great damage in many parts of the Section.

JULY.—The excessive heat of June continued throughout uly. The mean for the month has been exceeded but three mes in the past 30 years. The heat was greatest in the south-ntral portion, where high temperature records were estab-shed at a few stations. The rainfall averaged nearly one-half ich above the normal, but was deficient over the southwestern nd central portions. The heaviest rainfall occurred in the ortheast portion, Larimore reporting 10 inches. A tornado assed over Dickey County on the 2d, doing much damage. amage to crops from the severe heat was particularly noticeable ver the central and southwestern portions. Small grains ipened prematurely, and harvest was well under way at the lose of the month.

AUGUST.—The temperature and precipitation for the month veraged nearly the normal, the former being slightly above, nd the latter slightly below, the normal. The first decade was ie driest, and during this period the greater portion of small rains was harvested. The second decade was the coolest, and requent showers, in many instances quite heavy, relieved the roughty conditions somewhat. The third decade was both the armest and the wettest. Early threshing was delayed some-hat by showers.

SEPTEMBER.—From a temperature standpoint, the weather uring September was nearly normal. There was, however, an xcess of precipitation in nearly all parts of the State. While is excessive precipitation delayed threshing considerably, it as beneficial for fall plowing and for the seeding and germina-on of winter wheat and rye. Killing frosts were not general ntil the 25th, and in some instances not until the 30th. Corn ipened rapidly during the first decade, and was out of danger om the frosts when they occurred.

OCTOBER.—Favorable weather for outdoor work prevailed, and eld work made rapid advancement. Corn-husking was practi-ally completed during the month. There were but three tormy periods, and practically all of the precipitation occurred t those times; from the 6th to the 10th, inclusive, the 17-18th, nd from the 25th to the 28th, inclusive.

NOVEMBER.—Changeable weather as regards temperature prevailed throughout the State during the month. The weather at the opening of the month was above normal, a condition which prevailed during the first decade. The temperature during the second decade and during the first half of the third decade was below the normal. The month closed with generally mild temperatures. From the 7th to the 18th snow flurries were frequent. From the 19th to the close of the month only scattered snows occurred.

DECEMBER.—The temperature during the first and second decades was mild, and the snow covering rapidly disappeared. During the last decade there was a change to decidedly colder. Light scattered snows occurred from the 15th to the 22d, and again on the 30-31st.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXI. BISMARCK, N. D., JANUARY, 1922. No. 1

GENERAL SUMMARY.

Taken as a whole, the weather of the month was generally unfavorable. Owing to a shortage of feed in the southwest portion of the State, there was much suffering and some loss of livestock. High winds interfered greatly with highway traffic, but during the last decade this condition was somewhat improved. The first decade was the warmest, the highest temperature being generally recorded on the 9th; the last decade was the coldest, the lowest temperature being generally recorded on the 23d. There were two stormy periods, the first of considerable duration, although the amounts recorded were usually light. Scattered snows occurred from the 7th to the 21st, inclusive, and from the 29th to the close of the month, the heaviest snows occurring during the last-named period.

TEMPERATURE.

The mean temperature for the State was 7.0°, or 2.1° above the normal, and 8.9° lower than the mean for January, 1921. The highest mean reported was 20.6° at Medora, Billings County; the lowest was 1.3° at Hansboro, Towner County, and Pembina, Pembina County. The highest temperature reported was 55° at Medora, Billings County, on the 6th; the lowest was -46° at Minot, Ward County, on the 23d. The greatest monthly range was 85° at Donnybrook, Ward County, and at McKinney, Renville County; the least was 59° at Amidon, Slope County. The greatest daily range was 53° at Medora on the 28th.

PRECIPITATION.

The average precipitation for the State was 0.49 inch, or 0.05 inch below the normal, and 0.25 inch more than the average for January, 1921. The greatest monthly amount reported was 1.60 inches at Amenia, Cass County; the least was 0.10 inch at Arnegard, McKenzie County; at Energy, McLean County, and at Parshall, Mountrail County. The greatest amount recorded in any 24 consecutive hours was 0.70 inch at McHenry, Foster County, on the 29th. The average snowfall was 5.2 inches. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS.

Auroras were observed at Valley City on the 1st and 2d; at McLeod and Valley City on the 3d; at Crosby, Foxholm and Valley City on the 4th; at Valley City on the 5th; at Berthold Agency, Eckman, Foxholm, Grand Forks and Valley City on the 6th; at Pettibone and Steele on the 7th; at Grand Forks, Steele and Valley City on the 8th; at Pettibone and Valley City on the 9th; at McKinney on the 11th; at Steele on the 16th, 17th and 18th; at Eckman and Steele on the 19th; at Valley City on the 20th; at Foxholm on the 21st; at Foxholm and Howard on the 22d; at Foxholm, Grand Forks, Howard, McLeod and Valley City on the 23d; at Amidon, Arnegard, Beach, Berthold Agency, Eckman, Fessenden, Foxholm, Grand Forks, Linton, McLeod, Marmarth, Mott, Skaar, Valley City and Williston on the 24th; at Amidon and Eckman on the 25th; at Donnybrook on the 26th and 27th; at Pettibone on the 28th and 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

††Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for January, 1922.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXI. BISMARCK, N. D., FEBRUARY, 1922. No. 2

GENERAL SUMMARY.

The mean temperature was more than 7° below the normal, here having been but four colder Februarys in the climatologial history of the State. But one station (Pembina) showed a plus departure in temperature. The first decade was the warmst, and the third was the coldest. There was decidedly more han the normal precipitation, all of which occurred in the form of snow, and, being accompanied often by high winds, delayed ailway traffic, stopped highway traffic, and caused immense uffering and considerable loss of livestock. From a livestock tandpoint it was one of the most critical in the history of the State. The month opened with heavy precipitation in practially all parts of the State, a condition that prevailed until the 5th. From the 10th to the 12th snows were general, and again on the 21st-22d heavy snows occurred.

TEMPERATURE.

The mean temperature for the State was 0.7°, or 7.2° below he normal, and 19.2° lower than the mean for February, 1921. The highest mean reported was 5.4° at Edgeley, LaMoure County; the lowest was -4.5° at Howard, Divide County. The ighest temperature reported was 45° at Skaar, McKenzie County, on the 18th; the lowest was -39° at Skaar, McKenzie County, on the 27th. The greatest monthly range was 84° at Skaar, McKenzie County; the least was 47° at Park River, Walsh County. The greatest daily range was 59° at Beach, Golden Valley County, on the 19th.

PRECIPITATION.

The average precipitation for the State was 1.21 inches, or 0.72 inch above the normal, and 0.82 inch more than the avrage for February, 1921. The greatest monthly amount reported was 3.34 inches at Valley City, Barnes County; the least was a trace at Westhope, Bottineau County. The greatest amount ecorded in any 24 consecutive hours was 1.75 inches at Fulleron, Dickey County, on the 1st. The average number of days with 0.01 inch or more of precipitation was 5. The average nowfall was 12.8 inches.

AURORAS.

Auroras were observed at Valley City on the 2d; at McLeod, Moorhead and Valley City on the 3d; at Foxholm and Valley City on the 12th; at Berthold Agency and Valley City on the 3th; at Amidon, Arnegard, Beach, Bismarck, Eckman, Ellendale, Fessenden, Foxholm, Fullerton, Grand Forks, Howard, Marmarth, Mott, Skaar, Steele and Williston on the 14th; at Amidon, Devils Lake, Grand Forks, McLeod and Skaar on the 5th; at Ellendale, Foxholm and McLeod on the 17th; at Eckman, Steele and Valley City on the 18th; at Arnegard, Eckman, Ellendale, Foxholm, Grand Forks, McKinney, McLeod, Mott nd Valley City on the 19th; at Crosby, Devils Lake, Ellendale, Foxholm and McLeod on the 20th; at Foxholm on the 23d; at Valley City on the 25th; at Foxholm, Steele and Valley City on the 26th; at Crosby, Steele and Valley City on the 27th, and at Crosby, Foxholm, Grand Forks, Howard, McLeod, Mott and Valley City on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for February, 1922.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXI. Bismarck, N. D., March, 1922. No. 3

GENERAL SUMMARY.

The temperature at the opening of the month was below the normal, but rose rapidly and remained above the normal until near the close, when a change to decidedly colder occurred. The second decade was the warmest, the maximum for the month usually occurring on the 13th; the first decade was the coldest, with the minimum being generally recorded on the 1st. Owing to the mild temperature which prevailed during the first and second decades the snow covering was rapidly reduced, allowing livestock to graze on ranges, pastures and harvested fields. The soil was mostly too wet generally for spring farm work, and the highways were too soft for much auto or truck traffic. During the first half of the month there was practically no precipitation of any kind in the State. There was scattered precipitation during the last half of the month, with a general storm covering the State from the 24th to the 27th, inclusive. This storm, which consisted of snow, high winds and freezing temperature, caused much suffering of livestock from both exposure and from lack of feed. Winter grains were generally in good condition at the close of the month.

TEMPERATURE.

The mean temperature for the State was 25.8°, or 3.2° above the normal, and 0.6° higher than the mean for March, 1921. The highest mean reported was 29.4° at Linton, Emmons County, and Wahpeton, Richland County; the lowest was 19.0° at Howard, Divide County. The highest temperature reported was 60° at Hettinger, Adams County, on the 22d; the lowest was −30° at Berthold Agency, McLean County, and Skaar, McKenzie County, on the 1st. The greatest monthly range was 82° at Berthold Agency, McLean County, and Skaar, McKenzie County; the least was 46° at Bowbells, Burke County. The greatest daily range was 52° at Berthold Agency, McLean County, on the 1st.

PRECIPITATION.

The average precipitation for the State was 0.72 inch, or 0.11 inch below the normal, and 0.28 inch less than the average for March, 1921. The greatest monthly amount reported was 2.05 inches at Langdon, Cavalier County; the least was 0.04 inch at Beach, Golden Valley County. The greatest amount recorded in any 24 consecutive hours was 1.20 inches at Howard, Divide County, on the 24th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 6.4 inches.

AURORAS.

Auroras were observed at McLeod on the 1st; at Valley City on the 7th; at Pettibone on the 10th; at Foxholm and Skaar on the 12th; at Howard on the 13th; at McLeod and Steele on the 21st; at Steele on the 23d; at Howard, McLeod and Steele on the 25th; at Eckman and Foxholm on the 26th; at Foxholm, New England and Steele on the 27th; at Foxholm and Steele on the 28th and 30th, and at Eckman and Foxholm on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

ol. XXXI. BISMARCK, N. D., APRIL, 1922. No. 4

GENERAL SUMMARY.

Mild and dry weather prevailed at the opening of the month, condition which obtained during the greater part of the first lecade. Light showers, however, were quite general on the 6th nd 9th. The second decade was showery, but not sufficiently o to interfere to any great extent with spring seeding, which nade excellent progress, especially in the central and western ortions. Owing to weakened condition of livestock much yard eeding was required until the end of the second decade. Pasures and ranges improved rapidly during the last decade, alowing ample feed for livestock at the close of the month. Plowng for corn generally made good progress, but was delayed omewhat during the latter part of the second decade and the arly part of the third decade by frozen ground. The last decde was dry, with mild temperature. Highways were generally poor condition until about the middle of the month, when ragging became general, and at the close of the month all ain trails were in good condition.

TEMPERATURE.

The mean temperature for the State was 42.3°, or 0.6° above e normal, and 1.2° higher than the mean for April, 1921. he highest mean reported was 47.0° at Medora, Billings ounty; the lowest was 39.0° at Minot, Ward County. The ighest temperature reported was 89° at Mandan, Morton ounty, on the 23d; the lowest was −2° at Donnybrook and ansboro on the 18th, and at Bowbells on the 19th. The greatt monthly range was 82° at Donnybrook, Ward County; the ast was 50° at Wahpeton, Richland County. The greatest aily range was 51° at Donnybrook, Ward County, on the 18th.

PRECIPITATION.

The average precipitation for the State was 0.92 inch, or 46 inch below the normal, and 0.89 inch less than the avage for April, 1921. The greatest monthly amount rerted was 3.15 inches at Wahpeton, Richland County; the ast was a trace at Pembina, Pembina County. The greatest nount recorded in any 24 consecutive hours was 1.15 inches at orman, Sargent County, on the 6th. The average snowfall as 2.3 inches. The average number of days with 0.01 inch or ore of precipitation was 6.

AURORAS.

Auroras were observed at Steele on the 4th; at Foxholm on e 10th; at Foxholm and Williston on the 14th; at Foxholm d McLeod on the 16th; at Foxholm and Steele on the 20th; Bismarck, Devils Lake, Dickinson, Ellendale, Fessenden, ansboro, McHenry, McLeod, Mandan, Steele, Towner, Willisn and Moorhead on the 21st; at Eckman, Ellendale and rand Forks on the 22d; at Grand Forks on the 23d; at Carn, Eckman and Foxholm on the 24th; at Moorhead on the th; at Steele on the 26th; at New England on the 27th; at midon on the 28th, and at Williston on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXI. Bismarck, N. D., May, 1922. No. 5

GENERAL SUMMARY.

The weather during the greater part of the month was favorable for outdoor work, and field work made excellent progress. During the first decade the rainfall was generally sufficient for all needs, and did not interfere with field work to much extent. The second decade was the wettest of the month, and farm work was delayed in some eastern sections by too wet soil. The ast decade was the driest, and during this period excellent progress was made both in growth of vegetation and in field work. Spring wheat, rye, oats, barley, corn, meadows, pasures and ranges were generally in excellent condition at the close of the month. Some replanting of corn was necessary, due to cut worms. Both the temperature and precipitation were in excess of the normal. All stations produced mean emperatures above the normal, and all but eight stations produced monthly precipitation above the normal. Usually the highest temperature occurred on the 25th, 26th or 27th, and the owest occurred more often on the 19th than on any other date. Precipitation occurred in some part of the State on each day of he month, except the 24th and 25th.

TEMPERATURE.

The mean temperature for the State was 56.3°, or 3.7° above he normal, and 2.5° higher than the mean for May, 1921. The highest mean reported was 61.0° at Wahpeton, Richland County; the lowest was 52.0° at Howard, Williams County. The highest temperature reported was 93° at Pembina, Pembina County, on the 24th, and at Wahpeton, Richland County, n the 28th; the lowest was 24° at Arnegard, McKenzie County on the 3d. The greatest monthly range of temperature was 62° at Pembina, Pembina County; the least was 43° at Grand Forks, Grand Forks County, and Melville, Foster County. The greatest daily range was 52° at Hettinger, Adams County, on the 7th.

PRECIPITATION.

The average precipitation for the State was 3.11 inches, or .56 inch above the normal, and 0.65 inch more than the average for May, 1921. The greatest monthly amount reorted was 6.82 inches at Jamestown, Stutsman County; the east was 1.23 inches at Powers Lake, Mountrail County. The reatest amount recorded in any 24 consecutive hours was 2.97 inches at Fullerton, Dickey County, on the 10-11th. The average snowfall was 0.1 inch, but three stations reporting falls. The average number of days with 0.01 inch or more of precipitation was 12.

AURORAS.

Auroras were observed at Fessenden and New England on the th; at Foxholm on the 7th; at Grand Forks on the 9th; at ew England on the 12th and 17th; at Crosby, Foxholm and teele on the 18th; at Ellendale, Grand Forks and Steele on he 20th; at Devils Lake, Foxholm and Steele on the 23d; at rosby on the 24th, 25th and 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are us[illegible] determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

OL. XXXI. BISMARCK, N. D., JUNE, 1922. No. 6

GENERAL SUMMARY.

With the exception of a very few places, soil and weather con- tions at the opening of the month were favorable. There was actically no rain in the State during the first five days, but om the 6th to the 10th, inclusive, showers were general, being ccessive in places. Scattered showers continued throughout th the second and third decades, and at the close of the onth the soil was in excellent condition. The heavy rains ring the second decade interfered considerably with railway d highway traffic, especially in the central part of the State. ops of all kinds made rapid growth, and all were in excel- nt condition at the close of the month.

TEMPERATURE.

The mean temperature for the State was 63.5°, or 0.7° above e normal, and 4.7° lower than the mean for June, 1921. e highest mean reported was 71.5° at Mott, Hettinger unty; the lowest was 60.2° at Bottineau, Bottineau County. e highest temperature reported was 108° at Hettinger, Ad- ns County, on the 23d; the lowest was 30° at Skaar, Mc- enzie County on the 1st. The greatest monthly range of tem- rature was 65° at Hettinger, Adams County; the least was 43° Melville, Foster County. The greatest daily range was 54° Donnybrook, Ward County, on the 23d.

PRECIPITATION.

The average precipitation for the State was 3.78 inches, or 28 inch above the normal, and 0.27 inch more than the av- ge for June, 1921. The greatest monthly amount re- rted was 7.54 inches at Taylor, Stark County; the least s 0.64 inch at Howard, Divide County. The greatest amount corded in any 24 consecutive hours was 4.45 inches at Steele, dder County, on the 15th. The average number of days th 0.01 inch or more of precipitation was 9. From the 6th the 30th the precipitation was quite evenly distributed, but ring the first five days there was practically no precipitation the State.

AURORAS.

Auroras were observed at Crosby and Moorhead on the 2d; at and Forks on the 11th; at Washburn on the 12th; at New gland on the 15th; at Foxholm on the 17th; at Grand Forks the 18th; at Bismarck on the 24th, and at McKinney on the h.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for June, 1922.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

L. XXXI. Bismarck, N. D., July, 1922. No. 7

GENERAL SUMMARY.

Weather favorable for crops and outdoor work prevailed over
e State at the opening of the month. The first decade was
ther cool, frosts injurious to corn and garden truck occurring
the 7th. This cool period was followed by general showers
om the 8th to the 11th, inclusive, which were very beneficial.
e second decade was much warmer, high temperatures being
neral over the State on the 14th, on which day the maximum
r the month usually occurred. Only light scattered showers
curred during this decade. The third decade was the most
vorable, and crops and farm work made rapid advancement.
me reports of black rust were received, but owing to the ripe-
ss of spring wheat the damage was greatly lessened. Damag-
g hailstorms were reported, especially during the second dec-
e. At the close of the month rye harvest was completed,
d some threshing done. Spring wheat, oats, barley and
eltz harvest was well advanced. Corn was generally in the
r stage, and an unusually good crop in central and western
rts of the State. Pastures and ranges were good, but gener-
y needed rain.

TEMPERATURE.

The mean temperature for the State was 65.6°, or 1.9° below
e normal, and 5.8° lower than the mean for July, 1921.
e highest mean reported was 70.1° at Walhalla, Pembina
unty; the lowest was 61.0° at Bottineau, Bottineau County.
e highest temperature reported was 100° at Napoleon, Lo-
n County, on the 14th; the lowest was 30° at Minot, Ward
unty, and at Napoleon, Logan County, on the 7th. The great-
monthly range of temperature was 70° at Napoleon, Logan
unty; the least was 46° at Park River, Walsh County. The
eatest daily range was 52° at Edgeley, LaMoure County, on
e 31st.

PRECIPITATION.

The average precipitation for the State was 2.43 inches, or
18 inch below the normal, and 0.64 inch less than the av-
ge for July, 1921. The greatest monthly amount re-
rted was 6.15 inches at Larimore, Grand Forks County; the
st was 0.60 inch at Walhalla, Pembina County. The greatest
ount recorded in any 24 consecutive hours was 3.60 inches
Larimore, Grand Forks County, on the 26th. The average
mber of days with 0.01 inch or more of precipitation was 8.

AURORAS.

Auroras were observed at Crosby and Foxholm on the 6th; at
osby on the 7th; at New England on the 11th; at Crosby and
lendale on the 13th and 14th; at Howard on the 16th; at
xholm on the 17th; at Crosby on the 19th; at Howard on
e 23d; at Crosby, Grand Forks, McHenry and Moorhead on
e 26th; at Crosby and New England on the 27th, and at
osby and Devils Lake on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for July, 1922.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXI. BISMARCK, N. D., AUGUST, 1922. No. 8

GENERAL SUMMARY.

The month opened with weather favorable for development of crops, for harvesting of small grains and for haying. Threshing of winter rye was begun during the first decade. Flax was in the bloom stage, and corn was rapidly maturing also during the first decade. There were light scattered showers over the State during this period, not sufficient to aid pastures to any appreciable extent. The second decade was mostly hot and dry, the weather being very favorable for harvesting and threshing, but damaging to corn and late small grains and potatoes. Early corn hardened during this decade, and much was out of danger from frosts by the 20th. Showery weather prevailed at the opening of the third decade, but farm work was not materially delayed, and small grain harvest was practically completed, and considerable threshing was done. Corn was mostly out of danger from frosts. Pastures and ranges generally needed rain badly at the close of the month.

TEMPERATURE.

The mean temperature for the State was 69.8°, or 4.4° above the normal, and 2.6° higher than the mean for August, 1921. The highest mean reported was 75.2° at Linton, Emmons County; the lowest was 66.1° at McKinney, Renville County, and at Minot, Ward County. The highest temperature reported was 115° at Cando, Towner County, on the 2d; the lowest was 33° at Lisbon, Ransom County, on the 29th. The greatest monthly range of temperature was 73° at Cando, Towner County; the least was 49° at Ashley, McIntosh County. The greatest daily range was 55° at Cando, Towner County, on the 2d, and at Hettinger, Adams County, on the 27th.

PRECIPITATION.

The average precipitation for the State was 1.36 inches, or .92 inch below the normal, and 0.63 inch less than the average for August, 1921. The greatest monthly amount reported was 4.70 inches at Melville, Foster County; the least was 0.14 inch at Bowman, Bowman County. The greatest amount recorded in any 24 consecutive hours was 2.89 inches at Melville, Foster County, on the 20th. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS.

Auroras were observed at Williston on the 11th; at Foxholm and Williston on the 13th; at Foxholm on the 20th; at Grand Forks on the 21st; at Foxholm and Williston on the 22d; at McLeod and Williston on the 23d; at Crosby, Foxholm and McLeod on the 24th; at Grand Forks on the 25th; at Foxholm, McLeod and Williston on the 26th; at Bowman on the 27th, and at Grand Forks and New England on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for August, 1922.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXI. BISMARCK, N. D., SEPTEMBER, 1922. No. 9

GENERAL SUMMARY.

The month opened with light to heavy showers, which interfered somewhat with threshing, although beneficial for fall plowing and for the seeding of winter rye. Flax harvest was well advanced during the first decade, and some early flax threshed with good results. Corn deteriorated somewhat in many sections, due to drought; and ranges, pastures and meadows were in need of moisture. Light to heavy frosts were reported on the 10th. Cloudy, foggy and showery weather generally prevailed during the opening of the second decade, greatly interfering with threshing, completely stopping operations in some sections. The precipitation was beneficial for fall plowing, but generally insufficient. The third decade was dry, and farm work of all kinds made rapid progress. Corn was mostly matured and beyond danger from frosts. Not as much fall plowing or seeding of winter rye was accomplished as usual, due to dry soil. Livestock was in good condition at the close of the month.

TEMPERATURE.

The mean temperature for the State was 59.8°, or 3.4° above the normal, and 2.8° higher than the mean for September, 1921. The highest mean reported was 64.4° at Wahpeton, Richland County; the lowest was 54.6° at Bottineau, Bottineau County. The highest temperature reported was 104° at Linton, Emmons County, and Lisbon, Ransom County, on the 4th; the lowest was 23° at Minot, Ward County, on the 24th. The greatest monthly range of temperature was 74° at Linton, Emmons County, and at Lisbon, Ransom County; the least was 58° at Bottineau, Bottineau County. The greatest daily range was 67° at Lisbon, Ransom County, on the 4th.

PRECIPITATION.

The average precipitation for the State was 2.16 inches, or 0.52 inch above the normal, and 1.14 inches less than the average for September, 1921. The greatest monthly amount reported was 6.94 inches at Larimore, Grand Forks County; the least was 0.15 inch at New England, Hettinger County. The greatest amount recorded in any 24 consecutive hours was 4.20 inches at Larimore, Grand Forks County, on the 1st. There was no snowfall reported. There was an average of 6 days with 0.01 inch or more of precipitation.

AURORAS.

Auroras were observed at Grand Forks on the 7th; at Grand Forks and Park River on the 10th; at Amidon, Berthold Agency, Howard and Williston on the 14th; at Foxholm, Howard and Williston on the 15th; at Howard on the 18th; at Foxholm on the 19th; at Foxholm, Howard, McLeod and Williston on the 20th; at Crosby on the 21st and 22d; at Devils, Lake, Grand Forks, Howard and McLeod on the 23d; at Foxholm, Grand Forks and McLeod on the 24th; at Park River on the 25th; at Foxholm on the 26th; at Bismarck, Foxholm and Howard on the 27th; at Bowman, Eckman, Grand Forks and McLeod on the 28th, and at Eckman on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXI. BISMARCK, N. D., OCTOBER, 1922. No. 10

GENERAL SUMMARY.

Weather conditions during the month were generally favorable for outdoor work, but the soil was too dry in most localities for fall plowing and the seeding of winter rye. The temperature was considerably above normal during the first and fourth weeks, and slightly below normal during the second and third weeks. Practically no rain fell during the first twelve days, and fall plowing was delayed, but the weather was very favorable for threshing, which was somewhat backward, due to lack of machines. Corn husking and potato harvest were well advanced by the middle of the month, but potatoes were frozen in some localities by low temperatures on the 17-18th, and some of the poorer potatoes were not dug at all, due to low prices. By the end of the month fall plowing and the seeding of winter rye were improved somewhat by local showers, but the soil was mostly too dry for best results. The greatest precipitation deficiencies occurred in the Red River Valley. Pastures and ranges were somewhat dry, but livestock was generally in good condition at the close of the month.

TEMPERATURE.

The mean temperature for the State was 45.7°, or 1.9° above he normal, and 1.6° lower than the mean for October, 1921. The highest mean reported was 50.6° at Wahpeton, Richland County; the lowest was 40.2° at Bottineau, Bottineau County. The highest temperature reported was 98° at Carson, Grant County, on the 3d; the lowest was 8° at Bowman, Bowman County, and Pettibone, Kidder County, on the 17th. The greatest monthly range of temperature was 85° at Hettinger, Adams County; the least was 55° at Melville, Foster County. The greatest daily range was 58° at Dunn Center, Dunn County, Minot, Ward County, and Willow City, Bottineau County.

PRECIPITATION.

The average precipitation for the State was 0.57 inch, or .43 inch below the normal, and 0.16 inch less than the av-rage for October, 1921. The greatest monthly amount re-orted was 1.70 inches at Donnybrook, Ward County, and at teele, Kidder County; there was none at Larimore, Grand Forks County, and at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 1.70 inches at Donnybrook, Ward County, on the 30th. The aver-ge number of days with 0.01 inch or more of precipitation was 3. The greatest depth of snowfall reported was 9.2 inches t Garrison, McLean County. The average snowfall was 2.3 inches.

AURORAS.

Auroras were observed at Foxholm on the 11th and 12th; at rnegard and Foxholm on the 17th; at Foxholm on the 18th; Foxholm and Williston on the 19th; at Foxholm on the 21st, and at Pettibone on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for October, 1922.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXI. Bismarck, N. D., November, 1922. No. 11

GENERAL SUMMARY.

The weather during November was unusual, in that the temperature was, with but four exceptions, the highest of record in the climatological history of the State, and the precipitation was the heaviest ever recorded. Light to heavy general showers interfered somewhat with farm work during the first decade. Rapid progress was made during the second decade in farm work, especially fall plowing and the seeding of winter rye. A general rain covered the State on the 18th. The third decade was similar to the second, except that snow and low temperature prevailed at the close.

TEMPERATURE.

The mean temperature for the State was 31.8°, or 5.2° above he normal, and 10.8° higher than the mean for November, 1921. The highest mean reported was 36.8° at Wahpeton, Richland ounty; the lowest was 28.6° at Howard, Williams County. The highest temperature reported was 65° at Granville, Mc-enry County, on the 16th; the lowest was -8° at Howard, Williams County, on the 30th. The greatest monthly range f temperature was 65° at Granville, McHenry County; the east was 35° at McHenry, Foster County. The greatest daily ange was 38° at three stations.

PRECIPITATION.

The average precipitation for the State was 2.33 inches, or .75 inches above the normal, and 1.65 inches more than the verage for November, 1921. The greatest monthly amount reorted was 5.33 inches at Pembina, Pembina County; the least as 0.40 inch at Lamoine, Kidder County. The greatest mount recorded in any 24 consecutive hours was 2.50 inches t Pembina, Pembina County, on the 7th. The average snowll was 6.3 inches. The average number of days with 0.01 ich or more of precipitation was 6.

AURORAS.

Auroras were observed at Pettibone on the 1st, and at Park iver on the 16th and 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for November, 1922.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXI. BISMARCK, N. D., DECEMBER, 1922. No. 12

GENERAL SUMMARY.

The month opened with moderate temperature, but this condition was followed by decidedly colder weather on the 4th, and continued until the 19th. Snow was general from the 4th to the 7th, inclusive, and scattered snows continued until the 11th. Snow was also general on the 19th. From the 20th to the 30th mild temperature prevailed, with general snows on the 29th and 30th. There was a drop in temperature on the 31st. Livestock ranged on harvested fields and on ranges, except from the 4th to the 19th, when much yard feeding was necessitated. During this period both rail and auto traffic was greatly delayed. Only the main auto trails were open after the 7th. Marketing of grain by sleds, and caring for livestock, constituted the main portion of outdoor work. The snow covering at the close of the month was generally ample for winter rye, which was in good condition.

TEMPERATURE.

The mean temperature for the State was 8.5°, or 4.5° below the normal, and 8.0° lower than the mean for December, 1921. The highest mean reported was 15.8° at Amidon, Slope County; the lowest was 0.8° at Bottineau, Bottineau County. The highest temperature reported was 55° at Energy, McLean County, on the 27th; the lowest was -34° at Bottineau, Bottineau County, on the 9th, and at Howard, Williams County, on the 11th. The greatest monthly range of temperature was 81° at Energy, McLean County; the least was 56° at Melville, Foster County. The greatest daily range was 58° at Dickinson, Stark County, on the 18th.

PRECIPITATION.

The average precipitation for the State was 0.67 inch, or 0.13 inch above the normal, and 0.26 inch more than the average for December, 1921. The greatest monthly amount reported was 2.43 inches at Walhalla, Pembina County; there was none at Wahpeton, Richland County, and only a trace at Napoleon, Logan County, and at Westhope, Bottineau County. The greatest amount recorded in any 24 consecutive hours was .00 inch at Bowbells, Burke County, on the 20th. The average number of days with 0.01 inch or more of precipitation was 5. The average depth of snowfall was 7.4 inches. Twenty-nine inches of snow fell at Walhalla, Pembina County.

AURORAS.

Auroras were observed at Pettibone on the 10th; at Grand Forks on the 19th, and at Williston on the 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXI. BISMARCK, N. D., ANNUAL, 1922. No. 13

GENERAL SUMMARY.

The weather conditions throughout the State for the year 1922 were favorable for crops, for highway construction work, and for all outdoor occupations. Crop yields were good to excellent in all parts of the State, being especially good in those sections where diversification is practiced. Much road building was done, the total mileage constructed being the largest of record for the State. The year opened with comparatively mild temperature and slightly deficient precipitation, a condition which prevailed throughout January. February, however, was cold and stormy. The fore part of March was like the month preceding, but the latter part was mild and pleasant. April was mild and dry, and allowed spring work on farms and highways to make excellent progress. May and June were favorable and crop conditions were excellent at the close of the latter month. July and August were favorable from a temperature standpoint, but there was a deficiency in precipitation in each instance. September was warm, with more than the usual rainfall, and farm work was somewhat delayed. During October ideal threshing weather prevailed, and rapid progress was made. November and December were productive of more than the usual precipitation; but November was mild, while December was cold and stormy.

The mean annual temperature was 39.7°, or 0.9° above the normal, and 2.3° lower than the mean for 1921. The highest mean annual temperature reported was 43.7° at Wahpeton, Richland County; the lowest was 36.3° at Bottineau, Bottineau County. The highest temperature reported was 115° at Cando, Towner County, on August 2d; the lowest was -46° at Minot, Ward County, on January 23d. The temperature averaged above the normal during all months of the year, except February, July and December. The highest mean annual temperature ever recorded in the State was 42.0° in 1921; the lowest was 35.8° in 1893. The highest temperature ever recorded in the State was 124° at Medora, Billings County, on September 3, 1912; the owest was -56° at Goodall, McKenzie County, on January 12, 916.

The average precipitation for the State was 19.75 inches, or .81 inches above the normal, and 0.16 inch greater than the verage for 1921. The greatest annual precipitation reported was 33.14 inches at Larimore, Grand Forks County; the least was 4.50 inches at Napoleon, Logan County. The greatest monthly mount reported was 7.43 inches at Amidon, Slope County, in une; there was none at Larimore and Pembina in October, and t Wahpeton in December. The precipitation averaged above he normal six months, and below the normal six months. The heaviest annual precipitation ever recorded in the State was 23.57 inches in 1896; the least was 10.92 inches in 1917. The average snowfall for the State was 42.8 inches. The averge number of days with 0.01 inch or more of precipitation was 5. There were 155 clear days, 100 partly cloudy, and 110 loudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

JANUARY.—Taken as a whole, the weather of the month was nfavorable. Owing to a shortage of feed in the southwest part of the State, there was much suffering and some loss of livestock. High winds interfered greatly with highway traffic, but during the last decade this condition was somewhat improved. The first decade was the warmest, the highest temperature being generally recorded on the 9th; the last decade was the coldest, the lowest temperature being generally recorded on the 23d. Scattered snows occurred from the 7th to the 21st, inclusive, and from the 29th to the close of the month.

FEBRUARY.—The month was cold and stormy. The mean temperature was more than seven degrees below the normal. The month opened with heavy precipitation in practically all parts of the State, a condition that prevailed until the 5th. From the 10th to the 12th snows were general, and again on the 21-22d heavy snows occurred. The wind movement was above the normal, and combined with heavy snow and low temperature interfered greatly with rail and highway traffic, and caused considerable loss of livestock.

MARCH.—The temperature at the opening of the month was below the normal, but rose rapidly and remained above the normal until near the close, when a change to decidedly colder occurred. The second decade was the warmest, the maximum for the month usually occurring on the 13th; the first decade was the coldest, with the minimum being generally recorded on the 1st. The mild temperature rapidly reduced the snow covering, allowing livestock to graze on ranges, pastures and harvested fields. The soil was generally too wet for spring farm work, and the highways were too soft for much auto or truck traffic. But one severe storm occurred, from the 24th to the 27th, inclusive, and caused much suffering to livestock. Winter grains were generally in good condition at the close of the month.

APRIL.—Mild and dry weather prevailed at the opening of the month, a condition which obtained during the greater part of the first decade. Light showers, however, were general on the 6th and 9th. The second decade was showery, but not sufficiently so to interfere to any great extent with spring seeding. Owing to the weakened condition of livestock much yard feeding was required until the end of the second decade. Plowing for corn made good progress, though delayed somewhat by frozen ground. Most of the main auto trails were in good condition at the close of the month.

MAY.—Weather favorable for farm work prevailed, and excellent progress was made. Rainfall generally sufficient for all needs occurred and did not interfere with field work to any great extent. Spring wheat, rye, oats, barley, corn, meadows, pastures and ranges were generally in excellent condition at the close of the month. Cut worms caused some replanting of corn. Both the precipitation and temperature were above the normal.

JUNE.—With the exception of a very few localities, soil and weather conditions at the opening of the month were favorable. There was practically no rain in the State during the first five days, but from the 6th to the 10th, inclusive, showers were general, being excessive in places. Scattered showers continued throughout both the second and third decades. The soil was in excellent condition at the close of the month. The heavy rains during the second decade interfered considerably with railway and highway traffic. Crops of all kinds made rapid growth, and all were in excellent condition at the close of the month.

JULY.—The month opened with favorable weather. The first decade was rather cool, frosts injurious to corn and garden truck occurring on the 7th. This cool period was followed by general

[Continued on page 53.]

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 49.]

showers from the 8th to the 11th, inclusive, which were very beneficial. The second decade was much warmer, the temperature being particularly high on the 14th. Only light scattered showers occurred during this decade. The third decade was the most favorable, and crops and farm work made rapid advancement. Some reports of black rust were received, but owing to the ripeness of spring wheat the damage was greatly lessened. Damaging hailstorms were reported, especially during the second decade. Rye harvest was generally completed, and some threshing done. Other small grains were generally in excellent condition. Corn was generally in the ear stage at the close of the month, being an excellent crop in the central and western parts of the State.

AUGUST.—Favorable weather generally prevailed throughout the month. Light scattered showers occurred over the State during the first decade, but not sufficient to benefit pastures to any appreciable extent. The second decade was mostly hot and dry, the weather being very favorable for harvesting and threshing, but somewhat damaging to corn and late small grains and potatoes. Early corn hardened during this decade, and much was out of danger from frosts by the 20th. Showery weather prevailed at the opening of the third decade, but farm work was not materially delayed, and small grain harvest was practically completed, and considerable threshing was done. Pastures and ranges generally needed rain quite badly.

SEPTEMBER.—The month opened with light to heavy showers, which interfered somewhat with threshing, but which were very beneficial for fall plowing and for the seeding of winter rye. Pastures and ranges were also greatly improved. Flax harvesting was well advanced during the first decade, and some early flax was threshed, with good yields. Light to heavy frosts were reported on the 10th. Cloudy, foggy and showery weather generally prevailed during the second decade, greatly interfering with threshing, completely stopping operations in some sections. The third decade was dry, and farm work of all kinds made rapid progress. There was less fall plowing and seeding of winter rye than usual. Livestock was generally in good condition.

OCTOBER.—Weather favorable for farm work prevailed in all parts of the State Owing to the dryness of the soil very little fall plowing or seeding of winter rye was done. Practically no rain fell during the first twelve days of the month. Threshing, which was delayed considerably during September, made rapid progress. Corn husking and potato harvesting were well advanced. Some potatoes were frozen in the ground by low temperatures on the 17-18th, and some of the poorer potatoes were not dug at all, due to prevailing low prices.

NOVEMBER.—The weather during November was unusual, in that the temperature was, with but four exceptions, the highest of record in the climatological history of the State, and the precipitation was the heaviest ever recorded in the State for that month. Light to heavy general showers interfered somewhat with farm work during the first decade. Rapid progress was made during the second decade in farm work. Snow and low temperature prevailed at the close of the month.

DECEMBER.—The month opened with moderate temperature, but this condition was followed by decidedly colder weather on the 4th, and continued until the 19th. Snow was general from the 4th to the 7th, inclusive, and scattered snows continued until the 11th. Snow was also general on the 19th. From the 20th to 30th, inclusive, mild temperature prevailed, with general snows on the 29th and 30th. The temperature fell on the 31st.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXII. BISMARCK, N. D., JANUARY, 1923. No. 1

GENERAL SUMMARY.

Changeable weather characterized the first decade, but was generally favorable for outdoor work, for livestock and for win-er rye. Snow flurries during this period were general. The second decade was milder, and usually the highest temperature for the month was recorded on the 17th. During this period he snow covering was considerably reduced, allowing livestock o graze on ranges and harvested fields. Snowfall during this period was mostly limited to the 18th and 19th. The third decade was considerably colder, with quite general snows from he 27th to 30th, inclusive. Winter rye was generally well covered at the close of the month, and livestock was in good condition.

TEMPERATURE.

The mean temperature for the State was 10.1°, or 5.2° above he normal, and 3.1° higher than the mean for January, 1922. The highest mean reported was 24.6° at Marmarth, Slope County; the lowest was -0.2° at Bottineau, Bottineau County. The highest temperature reported was 56° at Hettinger, Ad-ms County, on the 9th; the lowest was -35° at Pembina, Pembina County, on the 5th. The greatest monthly range was 3° at Walhalla, Pembina County; the least was 49° at Ashley, McIntosh County. The greatest daily range was 75° at Graf-on, Walsh County, on the 18th.

PRECIPITATION.

The average precipitation for the State was 0.53 inch, or .01 inch below the normal, and 0.04 inch more than the verage for January, 1922. The greatest monthly amount re-orted was 1.36 inches at Forman, Sargent County; there was one at Parshall, Mountrail County. The greatest amount re-orded in any 24 consecutive hours was 0.75 inch at Napoleon, Logan County, on the 13th. The average snowfall was 6.0 inches. The average number of days with 0.01 inch or more f precipitation was 5.

AURORAS.

Auroras were observed at Foxholm on the 13th; at Beach on he 22d and 27th, and at Bismarck on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for January, 1923.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

UNIVERSITY OF ILLINOIS LIBRARY
APR 18 1923

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXII. BISMARCK, N. D., FEBRUARY, 1923. No. 2

GENERAL SUMMARY.

The weather throughout North Dakota during February was unusually cold and disagreeable, with more than the average snowfall and wind movement. The month opened with low temperature, accompanied by high winds, which caused the snow to interfere with both highway and railway traffic. Except for local use of sleds, highway traffic was brought to a standstill. One of the most severe storms in the climatological history of the State occurred during the second decade. Improved conditions, however, prevailed during the last decade. The snow covering was considerably reduced, allowing livestock to graze on ranges and harvested fields. The covering of snow on winter rye was sufficient up to the close of the month.

TEMPERATURE.

The mean temperature for the State was 4.1°, or 3.8° below the normal, and 3.4° higher than the mean for February, 1922. The highest mean reported was 11.8° at Hettinger, Adams County; the lowest was -4.1° at Bottineau, Bottineau County. The highest temperature reported was 48° at Hansboro, Towner County, on the 24th and 28th; the lowest was -40° at Westhope and Willow City, both in Bottineau County, on the 3d. The greatest monthly range was 84° at Hansboro, Towner County; the least was 60° at Fullerton, Dickey County. The greatest daily range was 61° at Jamestown, Stutsman County, on the 5th.

PRECIPITATION.

The average precipitation for the State was 0.65 inch, or 0.16 inch more than the normal, and 0.07 inch less than the average for February, 1922. The greatest monthly amount reported was 2.10 inches at Fullerton, Dickey County, and McHenry, Foster County; the least was a trace at Berthold Agency, McLean County. The greatest amount recorded in any 24 consecutive hours was 1.40 inches at Bowbells, Burke County, on the 15th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 7.2 inches.

AURORAS.

Auroras were observed at New England on the 2d; at Foxholm and McLeod on the 3d; at New England on the 7th and 14th; at Foxholm on the 16th; at McLeod on the 17th and 18th; at Foxholm and Howard on the 24th, and at Howard on the 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXII. Bismarck, N. D., March, 1923. No. 3

GENERAL SUMMARY.

The weather during March in North Dakota was much colder nd drier than usual, and there was less than the normal sunhine. As a result of these conditions there was practically no pring work performed on farms. The month opened with ather mild temperature, but was followed by cloudy and cold veather, a condition that prevailed during the second and third lecades. Usually the highest temperature for the month was ecorded on the 1st, and the lowest on the 18th. The precipiation was quite evenly distributed, both geographically and hroughout the month. Winter rye came through in generally ood condition, the snow covering being ample to the close of he month. Considerable yard feeding of livestock was reuired, but generally stock of all kinds were in good condition.

TEMPERATURE.

The mean temperature for the State was 18.3°, or 4.3° below he normal, and 7.5° lower than the mean for March, 1922. he highest mean reported was 27.8° at Hettinger, Adams ounty, and at Mott, Hettinger County; the lowest was 7.4° t Pembina, Pembina County. The highest temperature reorted was 65° at Bowman, Bowman County, on the 1st and d; the lowest was -35° at Willow City, Bottineau County, on he 18th. The greatest monthly range was 89° at Pembina, embina County; the least was 58° at Beach, Golden Valley ounty. The greatest daily range was 62° at Pettibone, Kidler County, on the 26th.

PRECIPITATION.

The average precipitation for the State was 0.41 inch, or .42 inch below the normal, and 0.31 inch less than the verage for March, 1922. The greatest monthly amount reorted was 1.68 inches at Hansboro, Towner County; the least as a trace at Cooperstown, Griggs County, and at Hillsboro, raill County. The greatest amount recorded in any 24 conecutive hours was 0.60 inch at Dunn Center, Dunn County, on he 12th. The average number of days with 0.01 inch or more f precipitation was 4. The average snowfall was 4.8 inches.

AURORAS.

Auroras were observed at Richardton on the 16th, and at oxholm on the 21st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for March, 1923.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXII. BISMARCK, N. D., APRIL, 1923. No. 4

GENERAL SUMMARY.

The weather during April, taken as a whole, was generally cold and unfavorable for farm work, for highway work, and for vegetation. The month opened with the ground frozen in all parts of the State, a condition which prevailed during the first and second decades. Generally the ground was quite free from snow in the western portion, and the snow covering was somewhat reduced in the east and south portions. Some seeding was done during the second decade, but wet and frozen ground interfered greatly, and not much was accomplished. During the third decade, however, a great improvement in both weather and soil conditions obtained, and excellent progress was made in the seeding of spring wheat and oats. Winter rye generally came through in good condition. Pastures and ranges were backward, necessitating considerable feeding of livestock, which were usually in good condition. Most of the main highways were considerably improved during the last decade, with some work on cross roads and lesser trails.

TEMPERATURE.

The mean temperature for the State was 38.7°, or 3.0° below the normal, and 3.5° lower than the mean for April, 1922. The highest mean reported was 43.8° at McLeod, Ransom County, and at Wahpeton, Richland County; the lowest was 32.2° at Bottineau, Bottineau County. The highest temperature reported was 89° at Jamestown, Stutsman County, on the 18th; 2d; the lowest was −15° at Willow City, Bottineau County, on the 1st. The greatest monthly range was 90° at Willow City, Bottineau County; the least was 62° at Hillsboro, Traill County. The greatest daily range was 59° at Skaar, McKenzie County, on the 18th.

PRECIPITATION.

The average precipitation for the State was 1.45 inches, or 0.07 inch above the normal, and 0.53 inch more than the average for April, 1922. The greatest monthly amount reported was 3.83 inches at Dunn Center, Dunn County; the least was a trace at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 2.50 inches at McHenry, Foster County, on the 13th. The average snowfall was 7.2 inches. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS.

Auroras were observed at Howard on the 10th, at Crosby on the 11th and 12th, at Foxholm on the 17th, at Arnegard, Foxholm, Howard and Williston on the 20th, and at Foxholm on the 21st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for April, 1923.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

UNIVERSITY OF ILLINOIS LIBRARY

Vol. XXXII. Bismarck, N. D., May, 1923. No. 5

GENERAL SUMMARY.

Scattered showers delayed farm and other outdoor work on the first day of the month, but rapid progress was made thereafter. During the first decade spring seeding was well advanced, and practically completed during the second decade. Much small grain, however, was stubbled in. Early sown wheat and oats were up to good stand and color at the close of the first decade, and at the close of the second much corn was planted, and early sown was up. Frosts and freezing temperatures occurred during the first decade in nearly all parts of the State, and in a few localities during the second decade, but only slight damage was reported. At the close of the month all crops were in excellent condition, although more rain was needed in many parts of the State for best results for grains and pastures. A slight increase in corn acreage, and a considerable increase in flax acreage, were reported.

TEMPERATURE.

The mean temperature for the State was 54.1°, or 1.5° above the normal, and 2.2° lower than the mean for May, 1922. The highest mean reported was 57.4° at Wahpeton, Richland County; the lowest was 49.8° at New Salem, Morton County. The highest temperature reported was 100° at New Salem, Morton County, on the 26th; the lowest was 13° at Pembina, Pembina County, on the 12th. The greatest monthly range of temperature was 83° at New Salem, Morton County; the least was 58° at Ashley, McIntosh County. The greatest daily range was 56° at Hansboro, Towner County, on the 23d.

PRECIPITATION.

The average precipitation for the State was 1.77 inches, or 0.78 inch below the normal, and 1.34 inches less than the average for May, 1922. The greatest monthly amount reported was 4.63 inches at Larimore, Grand Forks County; the east was 0.03 inch at Parshall, Mountrail County. The greatest amount recorded in any 24 consecutive hours was 3.55 inches at Edgeley, LaMoure County, on the 19th. The average snowall was 0.2 inch. The average number of days with 0.01 nch or more of precipitation was 6.

AURORAS.

Auroras were observed at Foxholm and Howard on the 3d; t Foxholm on the 7th; at Williston on the 17th, and at Howrd on the 21st and 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for May, 1923.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXII. BISMARCK, N. D., JUNE, 1923. No. 6

GENERAL SUMMARY.

The weather at the opening of the month was favorable for crops, although rain was needed in several sections of the State. Comparatively hot winds prevailed during the first four days, causing rapid evaporation of surface moisture. Spring wheat, oats, barley and speltz were in good condition, especially where well planted. During the first decade light scattered showers prevailed, but the rainfall in most sections was below the normal. The fore part of the second decade was similar to the first, with rain badly needed in many sections of the State. Highly beneficial rains occurred in practically all parts of the Section during the third decade, greatly relieving droughty conditions. In many instances, however, this moisture came too late to be of much benefit, except for corn and pastures. Severe hail and wind storms caused considerable loss of lives and property. Spring rye was headed and ripening rapidly at the close of the month, with indications of a poor yield. Corn was generally an excellent crop, and clean. Flax, both early and late sown, showed promise of good returns. Spring wheat, where well planted, was excellent, but where stubbled in was fair to poor. A few instances of black stem rust were reported on the last day of the month. Highways were generally excellent in all sections, particularly the main trails.

TEMPERATURE.

The mean temperature for the State was 66.1°, or 3.3° above the normal, and 2.6° higher than the mean for June, 1922. The highest mean reported was 70.8° at Wahpeton, Richland County; the lowest was 61.9° at New Salem, Morton County. The highest temperature reported was 100° at Dunseith, Rolette County, on the 16th, and at Hettinger, Adams County, on the 22d; the lowest was 30° at Hansboro, Towner County, on the 6th. The greatest monthly range of temperature was 70° at Hansboro, Towner County; the least was 40° at Richardton, Stark County. The greatest daily range was 55° at Hansboro, Towner County, on the 22d.

PRECIPITATION.

The average precipitation for the State was 3.82 inches, or 0.32 inch above the normal, and 0.04 inch more than the average for June, 1922. The greatest monthly amount reported was 10.27 inches at Power, Richland County; the least was 0.91 inch at McClusky, Sheridan County. The greatest amount recorded in any 24 consecutive hours was 4.85 inches at Fullerton, Dickey County, on the 21st. The average number of days with 0.01 inch or more of precipitation was 8.

AURORAS.

Auroras were observed at Richardton on the 1st; at Devils Lake and Williston on the 3d; at Grand Forks and Williston on the 4th; at Foxholm on the 5th; at Crosby on the 11th; at Crosby, Devils Lake and Foxholm on the 12th; at New England and Richardton on the 13th; at Crosby and New England on the 14th, and at Foxholm on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXII. BISMARCK, N. D., JULY, 1923. No. 7

GENERAL SUMMARY.

Taken as a whole the weather during July was generally favorable for crops and outdoor work. Heavy precipitation and high temperatures caused rapid propogation of black-stem rust, which damaged spring wheat extensively. Corn, however, made excellent progress, and was a good to excellent crop in all parts of the State at the close of the month. Several high winds and severe hailstorms did great damage in various parts of the State. At the close of the month rye harvest was practically completed, and some threshing done, with the crop generally poor. Spring wheat, oats, barley and speltz were ripening, and some early sown was harvested. Early flax indicates an excellent crop, although some late planted is rather weedy. Pastures, meadows and ranges were in good condition.

TEMPERATURE.

The mean temperature for the State was 71.2°, or 3.7° above the normal, and 5.6° higher than the mean for July, 1922. The highest mean reported was 74.4° at Fessenden, Wells County, and Wahpeton, Richland County; the lowest was 65.6° at Larimore, Grand Forks County. The highest temperature reported was 103° at Pembina, Pembina County, on the 9th; the lowest was 35° at Turtle Lake, McLean County, on the 30th. The greatest monthly range of temperature was 64° at Hansboro, Towner County. The greatest daily range was 54° at Hansboro, Towner County, on the 3d.

PRECIPITATION.

The average precipitation for the State was 3.14 inches, or 0.53 inch above the normal, and 0.71 inch more than the average for July, 1922. The greatest monthly amount reported was 6.16 inches at Washburn, McLean County; the least was 0.70 inch at Langdon, Cavalier County. The greatest amount recorded in any 24 consecutive hours was 5.00 inches at Steele, Kidder County, on the 20th. The average number of days with 0.01 inch or more of precipitation was 8.

AURORAS.

Auroras were observed at Devils Lake, Grand Forks and Williston on the 6th; at Napoleon on the 7th; at Williston on the 18th, and at New England on the 19th and 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXII. BISMARCK, N. D., AUGUST, 1923. No. 8

GENERAL SUMMARY.

Cool weather characterized the weather at the opening of the month, a condition that continued throughout the greater part of the month. In spite of cool weather, black stem rust caused deterioration in late spring wheat in practically all parts of the State. Rye harvesting was completed during the first decade, and considerable threshing accomplished during the month. Harvesting of spring wheat, oats and barley was well advanced early in the month, and flax harvest was general during the last two decades. Pastures and ranges generally were in need of rain at the opening of the month, but general showers during the first decade greatly relieved this condition, and during the remainder of the month were good to excellent. The precipitation was quite evenly distributed both geographically and throughout the month. While comparatively low temperature prevailed throughout the month, no damaging frosts occurred. Fall plowing, silo filling, potato digging, and haying were in general progress at the close of the month.

TEMPERATURE.

The mean temperature for the State was 63.0°, or 2.4° below the normal, and 6.8° lower than the mean for August, 1922. The highest mean reported was 67.0° at Wahpeton, Richland County; the lowest was 54.6° at Willow City, Bottineau County. The highest temperature reported was 97° at Westhope, Bottineau County, on the 31st; the lowest was 28° at Hansboro, Towner County, on the 24th. The greatest monthly range of temperature was 64° at Minto, Walsh County; the least was 46° at Bismarck, Burleigh County, and at Steele, Kidder County. The greatest daily range was 51° at Minot, Ward County, on the 30th.

PRECIPITATION.

The average precipitation for the State was 1.90 inches, or 0.38 inch below the normal, and 0.54 inch more than the average for August, 1922. The greatest monthly amount reported was 4.98 inches at Bottineau, Bottineau County; the least was 0.24 inch at Beach, Golden Valley County. The greatest amount recorded in any 24 consecutive hours was 2.90 inches at Bottineau, Bottineau County, on the 9th.

AURORAS.

An aurora was observed at Foxholm on the 19th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

ol. XXXII. Bismarck, N. D., September, 1923. No. 9

GENERAL SUMMARY.

The month opened with weather favorable for fall work. hock threshing of spring wheat, oats and barley was nearly ompleted during the first decade, and stack threshing was well nder way. Flax harvest was well advanced, with some early lax threshing done, the yields generally being good to excelent. During the second decade there was slight delay in hreshing by showers on the 16th and 17th; otherwise work ontinued uninterruptedly. Frosts and freezing temperatures ccurred in practically all parts of the State during this decade, ut owing to the advanced condition of vegetation little damage esulted. Showers were general during a considerable part of he third decade, interfering with threshing, but being very avorable for fall plowing and the seeding of winter rye. At the lose of the month there was an abundance of fall feed, livestock vere in good to excellent condition, and fall work was advanced o the average for this season of the year.

TEMPERATURE.

The mean temperature for the State was 60.1°, or 3.7° above ne normal, and 1.3° higher than the mean for September, 1922. he highest mean reported was 63.6° at Wahpeton, Richand County; the lowest was 54.0° at Hansboro, Towner ounty. The highest temperature reported was 99° at Arneard, McKenzie County, on the 3d; the lowest was 15° at Iansboro, Towner County, on the 13th. The greatest monthly nge of temperature was 78° at Bowbells, Renville County; the ast was 53° at Fullerton, Dickey County. The greatest daily nge was 64° at Walhalla, Pembina County, on the 15th.

PRECIPITATION.

The average precipitation for the State was 2.39 inches, or .75 inch above the normal, and 0.23 inch more than the verage for September, 1922. The greatest monthly amount reorted was 5.80 inches at New England, Hettinger County; the ast was 0.23 inch at Powers Lake, Burke County. The reatest amount recorded in any 24 consecutive hours was 3.32 ches at Fryburg, Billings County, on the 25th. No snowfall as reported. There was an average of 6 days with 0.01 inch more of precipitation.

AURORAS.

Auroras were observed at Eckman, Foxholm, Howard and Villiston on the 9th; at Howard on the 12th and 14th; at New ngland on the 15th; at Howard on the 20th; at Arnegard, ismarck, Fessenden, Finley, Grand Forks, Linton and Mooread on the 26th; at Bowman and Valley City on the 27th, d at Bismarck on the 29th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

'ol. XXXII. Bismarck, N. D., October, 1923. No. 10

GENERAL SUMMARY.

Weather favorable for all fall work prevailed throughout the nonth, and rapid progress was made in all kinds of farm work. 'hreshing of grain, particularly flax, occupied the first and econd decades, this activity being practically finished during hose decades, except some stacked flax which was unthreshed t the end of the month. Fall plowing and the seeding of inter rye progressed during the entire month, but in each instance the total acreage was somewhat less than the average. otato digging was completed during the month with generally ir yields. Much shipping of livestock was accomplished iroughout the month. Road construction was active in all ections and the condition of the main highways was generally ood.

TEMPERATURE.

The mean temperature for the State was 44.0°, or 0.2° above e normal, and 1.7° less than the mean for October, 1922. he highest mean reported was 48.4° at Fessenden, Wells ounty; the lowest was 38.4° at Mott, Hettinger County. he highest temperature reported was 84° at Lisbon, Ransom ounty, on the 10th; the lowest was -8° at Dunseith, Rotte County, on the 30th. The greatest monthly range of temerature was 86° at Dunseith, Rolette County; the least was 4° at Fessenden, Wells County. The greatest daily range was 1° at Westhope, Bottineau County, on the 15th.

PRECIPITATION.

The average precipitation for the State was 0.88 inch, or 12 inch below the normal, and 0.31 inch greater than the verage for October, 1922. The greatest monthly amount reorted was 2.70 inches at Bowman, Bowman County; there was ut a trace at Hillsboro, Traill County. The greatest amount ecorded in any 24 consecutive hours was 1.75 inches at Donybrook, Ward County, on the 10th. The average number of ays with 0.01 inch or more of precipitation was 4. The averge depth of snowfall was 0.5 inch, the greatest fall being 5.0 iches at Hannah, Cavalier County.

AURORAS.

Auroras were observed at Foxholm on the 7th; at Bowman the 13th; Arnegard, Crosby, Devils Lake, Foxholm, McLeod d Williston on the 14th; at Arnegard, Crosby, Grand Forks, inton and Williston on the 15th; at Arnegard, Crosby, Foxolm, Howard, McLeod, Williston and Moorhead (Minn.) on e 16th; at Crosby, Howard and Williston on the 17th; at 'illiston on the 18th, and at Larimore on the 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D. McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

ol. XXXII. Bismarck, N. D., November, 1923. No. 11

GENERAL SUMMARY.

Exceptionally favorable weather for farm and other outdoor ork prevailed throughout the State during the month. The emperature, with but a single exception (1917) was the highst of record for the State for the month. Late threshing and all plowing were generally completed during the month, and auch progress was made in corn husking. Livestock ranged reely on ranges and harvested fields, and at the close of the nonth were in fine condition.

TEMPERATURE.

The mean temperature for the State was 36.5°, or 9.9° above e normal, and 4.7° higher than the mean for November, 1922. he highest mean reported was 48.4° at Carson, Grant ounty; the lowest was 29.2° at Bowbells, Burke County. he highest temperature reported was 72° at Westhope, Bottieau County, on the 5th and 8th; the lowest was -5° at Eping, Williams County, on the 30th. The greatest monthly range f temperature was 69° at Eckman, Bottineau County; the least as 45° at Carson, Grant County. The greatest daily range was 4° at Grand Forks, Grand Forks County, on the 8th.

PRECIPITATION.

The average precipitation for the State was 0.50 inch, or .08 inch below the normal, and 1.83 inches less than the verage for November, 1922. The greatest monthly amount reorted was 1.42 inches at Lisbon, Ransom County; the least was .04 inch at Bowman, Bowman County. The greatest amount ecorded in any 24 consecutive hours was 0.78 inch at Lisbon, ansom County, on the 12th. The average snowfall was 0.6 ch. The average number of days with 0.01 inch or more of recipitation was 3.

AURORAS.

Auroras were observed at Crosby and Foxholm on the 2d; at oxholm on the 3d; at Foxholm and Howard on the 8th; at ew England on the 16th, 21st and 27th; at Eckman and oward on the 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXII. BISMARCK, N. D., DECEMBER, 1923. No. 12

GENERAL SUMMARY.

The weather during the month was exceptionally mild and pleasant up to and including the 26th, and only during the last four days did seasonable weather prevail. As a result of the mild weather during the greater portion of the month, rapid progress was made in farm work, all kinds being practically completed, except some corn husking and marketing of grain. More road construction work was accomplished than ever of record in the State for this month. Livestock grazed on harvested fields and ranges, thus saving an immense amount of feed to the farmers of the State. The mean temperature for State was, with but a single exception (1913) the highest of record for December.

TEMPERATURE.

The mean temperature for the State was 22.2°, or 9.2° above he normal, and 13.7° higher than the mean for December, 1922. The highest mean reported was 27.4° at Amidon, Slope County; the lowest was 17.1° at Bowbells, Burke County. The highest temperature reported was 62° at Amenia, Cass County, on the 17th; the lowest was -36° at Dunseith on the 30th. The greatest monthly range of temperature was 88° at Dunseith, Rolette County; the least was 68° at Lisbon, Ransom County, and at Valley City, Barnes County. The greatest daily ange was 49° at Dickinson, Stark County, on the 9th.

PRECIPITATION.

The average precipitation for the State was 0.32 inch, or .22 inch below the normal, and 0.35 inch less than the verage for December, 1922. The greatest monthly amount reported was 0.96 inch at Grand Forks, Grand Forks County; here was only a trace at Garrison, McLean County. The reatest amount recorded in any 24 consecutive hours was 0.40 inch at Hettinger, Adams County, on the 29th, and at Wahpeton, Richland County, on the 27th. The average snowfall for he State was 3.6 inches. The average number of days with .01 inch or more of precipitation was 3.

AURORAS.

Auroras were observed at Linton on the 4th, at Foxholm on the 9th, 13th and 27th, and at Williston on the 18th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXII. Bismarck, N. D., Annual, 1923. No. 13

GENERAL SUMMARY.

Taken as a whole, the weather during 1923 was favorable for crops. Comparatively mild temperature prevailed during January, but during February, March and April the temperature was below normal. During these four months the average precipitation was nearly the normal. Practically no spring work on farms was accomplished until the latter part of April, and pastures, ranges and meadows were very backward. During both May and June exceptionally favorable weather prevailed, and prospects for excellent crops were general. During July, however, heavy precipitation and high temperature caused serious damage to spring wheat from black stem rust, reducing what promised to be an abundant yield in this crop to only fair. During the remainder of the year exceptionally favorable weather prevailed, especially during November and December.

The mean annual temperature was 40.7°, or 1.9° above the normal, and 1.0° higher than the mean for 1922. The highest mean annual temperature reported was 44.4° at Wahpeton, Richland County; the lowest was 36.5° at Bottineau, Bottineau County. The highest temperature reported was 103° at Pembina, Pembina County, on July 9th; the lowest was −40° at Westhope and Willow City, both in Bottineau County, on February 3d. The temperature averaged above the normal during all months of the year, except February, March, April and August. The highest mean annual temperature ever recorded in the State was 42.0° in 1921; the lowest was 35.8° in 1893. The highest temperature ever recorded in the State was 124° at Medora, Billings County, on September 3, 1912; the lowest was −56° at Goodall, McKenzie County, on January 12, 1916.

The average precipitation for the State was 17.76 inches, or 0.18 inch below the normal, and 1.99 inches less than the average for 1922. The greatest annual precipitation reported was 25.50 inches at Fullerton, Dickey County; the least was 11.03 inches at Berthold Agency, McLean County. The greatest monthly amount reported was 10.27 inches at Power, Richland County, in June; there was none at Parshall, Mountrail County, in January. The precipitation averaged above the normal four months, and below the normal eight months.The heaviest annual precipitation ever recorded in the State was 23.57 inches in 1896; the least was 10.92 inches in 1917. The average snowfall for the State was 30.1 inches. The average number of days with 0.01 inch or more of precipitation was 64. There were 160 clear days, 110 partly cloudy, and 95 cloudy days. The prevailing wind was northwest.

THE WEATHER BY MONTHS.

January.—Changeable weather characterized the first decade, but was generally favorable for outdoor work, for livestock and for winter rye. The second decade was milder; during this period the snow covering was considerably reduced, allowing livestock to graze on ranges and harvested fields. The third decade was considerably colder, with general snows from the 27th to 30th, inclusive. Winter rye was well covered, and livestock in good condition at the close of the month.

February.—Cold and disagreeable weather prevailed, with more than the average snowfall and wind movement, causing much delay to railway traffic, and stopping highway traffic, except with sleds. One of the most severe storms in the climatological history of the State occurred during the second decade. Somewhat improved conditions prevailed during the last decade. Winter rye was sufficiently covered at the close of the month.

March.—Practically no spring work on farms was performed during the month, owing to cold and cloudy weather, especially during the second and third decades. The precipitation was quite evenly distributed, both geographically and throughout the month. Winter rye was in good condition. Considerable yard-feeding of livestock was necessary.

April.—The weather was cold and unfavorable for farm work, for highway work, and for germination. The month opened with the ground frozen in all parts of the State, a condition that continued until the close of the second decade. Some seeding was done during the second decade, and during the third decade seeding made rapid progress. Winter rye generally came through the winter in good condition. Ranges and pastures were backward, necessitating considerable feeding of livestock..

May.—Farm work made rapid progress during the month. Much seeding was done during the first decade, some of the early sown being up to good stand. During the second decade corn planting was general. Frosts and freezing temperatures were general during this decade, but no serious damage occurred. Crops were in good condition at the close of the month. Reports indicated an increase in both corn and flax acreage.

June.—Weather was favorable at the beginning of the month, although rain was needed in some parts of the State. Only light precipitation occurred during the first decade, and in the first part of the second decade, but highly beneficial rains occurred during the latter part of the month, greatly relieving droughty conditions. In many instances this moisture came too late to be of benefit, except for corn and pastures. Spring

The mean departures from normal temperatures are based on records from stations that have ten or more years of observations. [a], 1 day missing, [b], 2 days missing, etc.

[Continued from page 49.]

ye was headed and ripening rapidly at the close of the month. pring wheat, where well planted, was generally in excellent ondition, but where stubbled in was fair to poor. Reports of lack stem rust were received at the close of the month.

JULY.—Heavy precipitation and high temperatures caused apid growth of all vegetation, but also caused rapid propagaion of black stem rust in spring wheat, the damage being exensive. The weather, however, was favorable for corn, which vas in good condition in all sections at the close of the month. mall grains ripened rapidly during the last decade, and some arly sown were harvested.

AUGUST.—Cool weather prevailed at the opening of the month nd continued generally until the close. In spite of the cool veather, black stem rust continued to cause deterioration in pring wheat, especially the late sown. Harvesting of rye, pring wheat, oats and barley was well advanced by the second lecade. Fall plowing, silo filling, potato digging and haying vere well under way at the close of the month.

SEPTEMBER.—During the first and second decades, weather avorable for threshing prevailed. Flax harvest also made exellent progress. Showers were prevalent during the third decde, and interfered considerably with threshing, but improved onditions for fall plowing, and for the seeding of winter rye. here was an abundance of fall feed, and livestock was in good o excellent condition.

OCTOBER.—Under favorable weather conditions, fall work nade rapid progress. Threshing was mostly completed during he month. Fall plowing and the seeding of winter rye coninued, the acreage sown to winter rye being somewhat below he average. Much shipping of livestock was done. Road contruction was active in all sections, and the condition of the nain highways was excellent.

NOVEMBER.—Mild and pleasant weather prevailed throughut the month, the mean temperature for the month being the ighest of record for November, with but one exception (1917). ate threshing and fall plowing were completed, and corn husking made rapid progress during the month. Livestock ranged freely on ranges and harvested fields, and were generally in fine condition.

DECEMBER.—The weather during the month, as during November, was mild and pleasant. Corn husking and marketing of grain were the main farm activities. Road work continued uninterruptedly throughout the month. Livestock grazed on harvested fields, thus saving much feed to the farmers of the State. The mean temperature was, with but one exception (1913) the highest in the climatological history of the State.

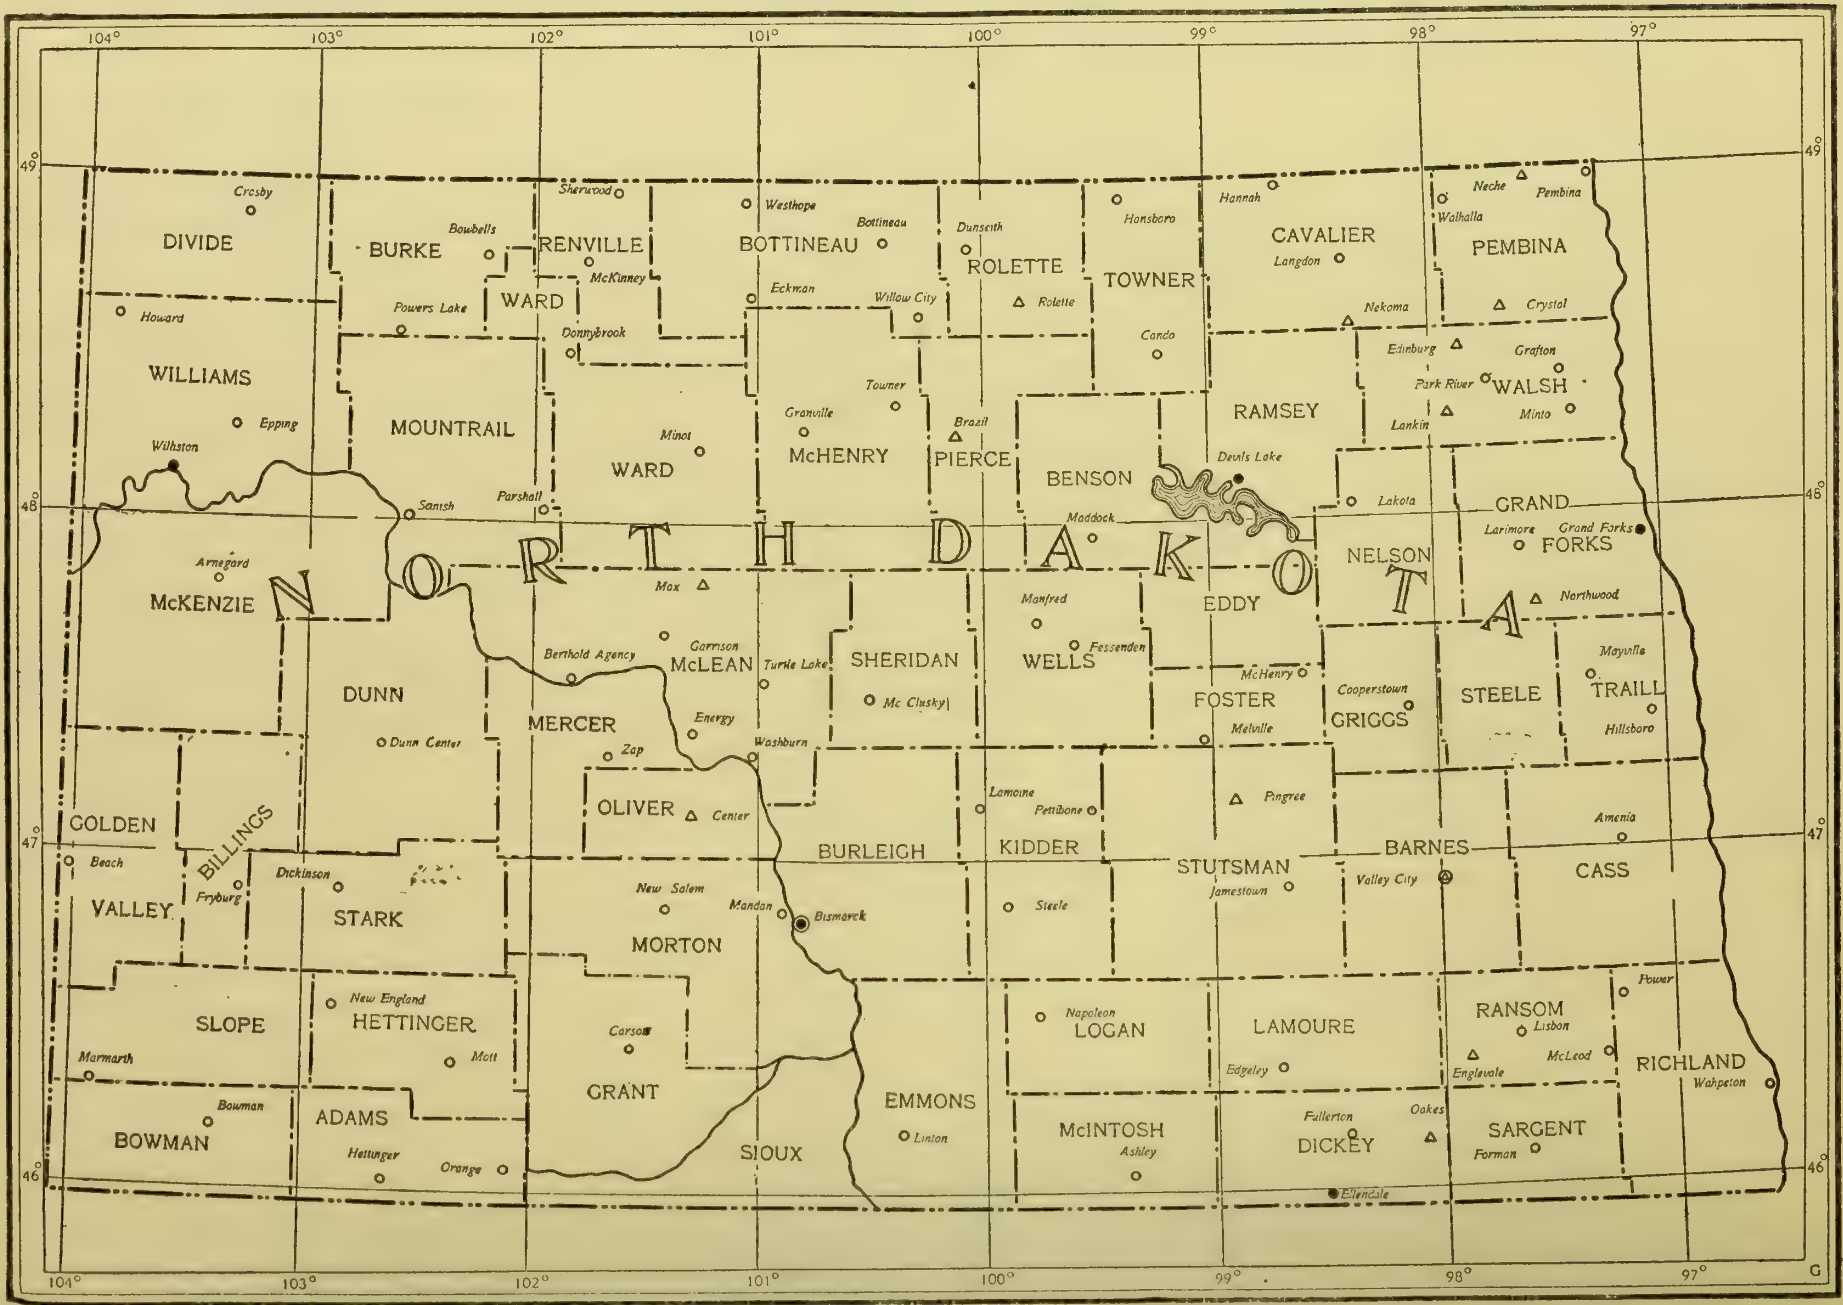
CHART SHOWING METEOROLOGICAL OBSERVATION, FORECAST DISTRIBUTION AND DISPLAY STATIONS.



Key to Symbols: ● Meteorological observations (regular Weather Bureau stations). ○ Meteorological observations (sub-stations). △ Display or distribution of forecasts.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXIII. BISMARCK, N. D., JANUARY, 1924. No. 1

GENERAL SUMMARY.

The month opened with severe weather prevailing in all sections, effectively stopping farm work and road construction, and necessitating considerable feeding of livestock. This condition prevailed during the first and second decades, and the first few days of the third decade. The last week in the month, however, was generally mild and pleasant, allowing livestock to range on harvested fields and ranges. The month was devoid of severe storms, and there was more than the usual sunshine. The main farm activity consisted in the marketing of grain and livestock, and in the care of the latter.

TEMPERATURE.

The mean temperature for the State was 2.6°, or 2.3° below the normal, and 7.5° lower than the mean for January, 1923. The highest mean reported was 10.0° at Marmarth, Slope County; the lowest was -4.2° at Langdon, Cavalier County. The highest temperature reported was 61° at Berthold Agency, McLean County, on the 31st; the lowest was -42° at Dunseith, Rolette County, on the 1st and 2d. The greatest monthly range was 92° at Berthold Agency, McLean County; the least was 68° at Park River, Walsh County. The greatest daily range was 71° at Bottineau, Bottineau County, on the 5th.

PRECIPITATION.

The average precipitation for the State was 0.23 inch, or 0.31 inch below the normal, and 0.30 inch less than the average for January, 1923. The greatest monthly amount reported was 0.96 inch at Hannah, Cavalier County; there was none at Bowbells, Burke County, Forman, Sargent County, Lamoine, Kidder County, and Wahpeton, Richland County. The greatest amount recorded in any 24 consecutive hours was 0.50 inch at Towner, McHenry County, on the 24th. The average snowfall was 2.5 inches. The average number of days with 0.01 inch or more of precipitation was 3.

AURORAS.

Auroras were observed at Arnegard on the 6th; at Foxholm on the 15th; at Ashley, Epping, Howard and McHenry on the 28th; at Arnegard, Bowman, Devils Lake, Ellendale, Fessenden, Finley, Foxholm, Fryburg, Fullerton, Grand Forks, Hansboro, Larimore, Linton, McClusky, McKinney, McLeod, Marmarth, Minto, Napoleon, New England, Sharon, Stanton, Turtle Lake, Valley City, Williston and Moorhead on the 29th; at Bowman, Eckman, McKinney, Pettibone, Towner and Westhope on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, a, b, c, appearing in the table indicate number of days missing; for example, b represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

Daily Precipitation for January, 1924.

ol. XXXIII. Bismarck, N. D., February, 1924. No. 2

GENERAL SUMMARY.

Unusually mild and pleasant weather prevailed throughout
e State during the month. The mean temperature (20.3°)
as the highest of record for the month in the climatological
istory of the State, the nearest approach being that for Febru-
ry, 1921, (19.9°). The month was free from severe storms,
ere was an abundance of sunshine, and the precipitation was
elow normal. As a result of the mild weather, livestock
nged freely on ranges and harvested fields, thus saving much
ed. The snow covering was reduced during the month, and
me apprehension was expressed in some sections as to the
ndition of winter rye.

TEMPERATURE.

The mean temperature for the State was 20.3°, or 12.4° above
e normal, and 16.2° higher than the mean for February, 1923.
he highest mean reported was 28.8° at Berthold Agency, Mc-
ean County; the lowest was 13.7° at Langdon, Cavalier County.
he highest temperature reported was 67° at Berthold Agency,
cLean County, on the 11th; the lowest was -27° at Hansboro,
owner County, and at Willow City, Bottineau County, on the
st. The greatest monthly range was 82° at Dunn Center,
unn County; the least was 58° at Hillsboro, Traill County.
he greatest daily range was 53° at Jamestown, Stutsman
ounty, on the 24th.

PRECIPITATION.

The average precipitation for the State was 0.41 inch, or
08 inch below the normal, and 0.24 inch less than the
erage for February, 1923. The greatest monthly amount re-
rted was 1.01 inches at Foxholm, Ward County; there was
ly a trace at Berthold Agency, McLean County, and at Han-
h, Cavalier County. The greatest amount recorded in any
consecutive hours was 1.00 inch at Towner, McHenry County,
the 17-18th. The average number of days with 0.01 inch
more of precipitation was 3. The average snowfall was 4.2
ches.

AURORAS.

Auroras were observed at Bowman on the 1st; at Finley,
xholm, Linton, McLeod and Pettibone on the 5th; at Mc-
eod and Pettibone on the 6th; at Arnegard on the 9th; at
xholm on the 10th and 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXIII. Bismarck, N. D., March, 1924. No. 3

GENERAL SUMMARY.

Unusually mild weather prevailed in all sections of the State at the opening of the month, which rapidly reduced the snow covering. This condition generally prevailed during the first and second decades. During this period spring work on farms was begun, considerable spring wheat was planted in the central and southeast portions, and some spring plowing accomplished. There was, however, a deficiency of precipitation during the period. During the last decade farm work was considerably delayed, due to frozen ground in the east portion, and by snow and low temperature in the west and central portions. During the second decade wild and tame grasses and winter rye were well started.

TEMPERATURE.

The mean temperature for the State was 25.5°, or 2.9° above the normal, and 7.2° higher than the mean for March, 1923. The highest mean reported was 30.0° at Wahpeton, Richland County; the lowest was 19.8° at Hansboro, Towner County. The highest temperature reported was 58° at Amidon, Slope County, on the 1st; the lowest was -20° at Westhope, Bottineau County, on the 6th. The greatest monthly range was 70° at Westhope, Bottineau County; the least was 40° at Hillsboro, Traill County, and Park River, Walsh County. The greatest daily range was 41° at Carson, Grant County, on the 31st, and at Westhope, Bottineau County, on the 14th.

MAY

PRECIPITATION.

The average precipitation for the State was 0.45 inch, or 0.38 inch below the normal, and 0.03 inch more than the average for March, 1923. The greatest monthly amount reported was 1.45 inches at Fryburg, Billings County; there were only traces at Hansboro, Lisbon, Wahpeton and Westhope. The greatest amount recorded in any 24 consecutive hours was 0.80 inch at Hettinger, Adams County, and at Amidon, Slope County, on the 28th. The average number of days with 0.01 inch or more of precipitation was 4. The average snowfall was 4.4 inches.

AURORAS.

Auroras were observed at Finley, Foxholm, McLeod, Williston and Moorhead on the 2d; at Pettibone on the 5th; at Crosby on the 29th, and at Crosby and Howard on the 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

§§ Instruments are read in the morning; the maximum temperature then read is charged to the preceding day, on which it almost always occurs. [a] 1 day missing. [b] 2 days, etc.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXIII. Bismarck, N. D., April, 1924. No. 4

GENERAL SUMMARY.

The month opened with weather favorable for outdoor work, and seeding, spring plowing and highway work made rapid progress during the first decade. The second decade, however, was not so favorable, considerable delay being caused by snows and wet ground, especially in the north and west portions. Work in the south and east portions made fair progress. The third decade opened rather favorable, a condition that prevailed for three days, when heavy precipitation occurred in nearly all parts of the State, effectively stopping farm work. Winter rye came through in fair condition, being winter-killed in some sections. Pastures and ranges were excellent, and livestock were in good condition at the close of the month.

TEMPERATURE.

The mean temperature for the State was 39.3°, or 2.4° below the normal, and 0.6° higher than the mean for April, 1923. The highest mean reported was 46.8° at Towner, McHenry County; the lowest was 35.8° at Willow City, Bottineau County. The highest temperature reported was 84° at Lisbon, Ransom County, on the 24th; the lowest was 6° at Pettibone, Kidder County, on the 3d. The greatest monthly range was 75° at Wahpeton, Richland County; the least was 47° at Howard, Williams County. The greatest daily range was 58° at Steele, Kidder County, on the 12th.

PRECIPITATION.

The average precipitation for the State was 2.55 inches, or 1.17 inches above the normal, and 1.10 inches more than the average for April, 1923. The greatest monthly amount reported was 5.91 inches at Park River, Walsh County; the least was 0.50 inch at Bottineau, Bottineau County. The greatest amount recorded in any 24 consecutive hours was 2.74 inches at Hannah, Cavalier County, on the 26-27th. The average number of days with 0.01 inch or more of precipitation was 9. The average snowfall was 7.5 inches.

AURORAS.

Auroras were observed at Crosby on the 7th; Williston on the 13th, and at New England on the 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ‡‡Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

Vol. XXXIII. Bismarck, N. D., May, 1924. No. 5

GENERAL SUMMARY.

The weather during May was generally unfavorable for crops and for outdoor work. The mean temperatures recorded at all stations were decidedly below the normal, the mean for the State showing the lowest, with but two exceptions, in the climatological history of the section. There was much cloudiness, but the precipitation was below the normal in all parts of the State. The precipitation was unevenly distributed geographically. A light general rain covered the State from the 5th to 8th, inclusive; during the remaining days of the month, only light scattered showers occurred. Farm work made good progress, but due to cool and cloudy weather vegetation was backward at the end of the month. Frosts were frequent and some damage to garden truck and fruits was reported. There was much work done on main highways, and roads were in excellent condition.

TEMPERATURE.

The mean temperature for the State was 46.9°, or 5.7° below the normal, and 7.2° lower than the mean for May, 1923. The highest mean reported was 51.4° at Towner, McHenry County; the lowest was 44.2° at Langdon, Cavalier County, and at Maryville, Traill County. The highest temperature reported was 84° at Pembina, Pembina County, on the 15th; the lowest was 15° at Pettibone, Kidder County, on the 5th and 24th, and at McKinney, Renville County, on the 26th. The greatest monthly range of temperature was 68° at McKinney, Renville County; the least was 49° at Ashley, McIntosh County. The greatest daily range was 53° at Napoleon, Logan County, on the 22d.

PRECIPITATION.

The average precipitation for the State was 0.79 inch, or 1.76 inches below the normal, and 0.98 inch less than the average for May, 1923. The greatest monthly amount reported was 3.32 inches at Maryville, Traill County; the least was 0.02 inch at Dunseith, Rolette County. The greatest amount recorded in any 24 consecutive hours was 1.22 inches at Richardton, Stark County, on the 6th. The average snowfall was 2.4 inches. The average number of days with 0.01 inch or more of precipitation was 5.

AURORAS.

Auroras were observed at Crosby on the 2d and 3d; at Ellendale, Fessenden, Foxholm, Grand Forks, Howard, Minto, Sharon, and Valley City on the 21st; at Ellendale, Foxholm and Grand Forks on the 22d; at Foxholm on the 25th; at Foxholm, Howard, New England and Williston on the 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, [a], [b], [c], appearing in the table indicate number of days missing; for example, [b] represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXIII. BISMARCK, N. D., JUNE, 1924. No. 6

GENERAL SUMMARY.

The weather during June was one of the most favorable in the climatological history of the State. The weather was cool, which was decidedly favorable for all small grains, and at the close of the month spring wheat, oats, barley, speltz and winter rye were in excellent condition. While somewhat too cool for the germination and growth of corn, that crop was also in good condition at the close of the month, being of good stand and color, and free from weeds. Pastures and ranges afforded abundant feed, and wild and tame grasses promised excellent hay crop. The month was free from damaging hot winds, and no extremely high temperatures were recorded. Several damaging hailstorms occurred, particularly on the 18th, when winds of high velocity occurred. The precipitation was unusually well distributed, both geographically and throughout the month. Much work was done on primary highways, and at the close of the month those thoroughfares were in excellent condition.

TEMPERATURE.

The mean temperature for the State was 58.6°, or 4.2° below the normal, and 7.5° lower than the mean for June, 1923. The highest mean reported was 65.0° at Mott, Hettinger County; the lowest was 54.6° at Arnegard, McKenzie County. The highest temperature reported was 89° at Bottineau, Bottineau County, on the 30th; the lowest was 26° at Grafton, Walsh County, on the 7th. The greatest monthly range of temperature was 60° at Grafton, Walsh County, and at Hettinger, Adams County. The greatest daily range was 50° at Donnybrook, Ward County, on the 1st.

PRECIPITATION.

The average precipitation for the State was 4.17 inches, or 0.67 inch above the normal, and 0.35 inch more than the average for June, 1923. The greatest monthly amount reported was 7.57 inches at Bowbells, Burke County; the least was 1.85 inches at Pembina, Pembina County. The greatest amount recorded in any 24 consecutive hours was 4.00 inches at Bowbells, Burke County, on the 19th. The average number of days with 0.01 inch or more of precipitation was 11.

AURORAS.

Auroras were observed at Howard on the 9th; at Foxholm and Grand Forks on the 10th; at Grand Forks on the 11th, and at New England on the 15th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.

CLIMATOLOGICAL DATA.

NORTH DAKOTA SECTION.

ORRIS W. ROBERTS, Meteorologist.

VOL. XXXIII. BISMARCK, N. D., JULY, 1924. No. 7

GENERAL SUMMARY.

Weather favorable for farm work and for crops generally prevailed in all parts of the State throughout the month. The month opened with moderate temperature, abundant sunshine and only light precipitation, a condition that prevailed until the 15th, except for general showers on the 8th. From the 16th to the close of the month showers were general, there was considerable cloudiness, and the temperature was below the normal. The mean temperature for the State was, with but two exceptions, the lowest of record, the two exceptions being in 1904 and 1911.

At the close of the month all crops were excellent. Winter rye and barley harvest was well under way, and spring wheat was practically headed in all sections, with but few scattered reports of black stem rust. Corn and flax, which showed a greatly increased acreage, were well advanced, considering the cool weather. Pastures and ranges were good to excellent generally, although a few sections needed rain.

TEMPERATURE.

The mean temperature for the State was 65.5°, or 2.0° below the normal, and 5.7° lower than the mean for July, 1923. The highest mean reported was 68.6° at Linton, Emmons County; the lowest was 61.9° at McKinney, Renville County. The highest temperature reported was 99° at Beach, Golden Valley County, on the 28th; the lowest was 32° at Hansboro, Towner County, on the 13th and 17th. The greatest monthly range of temperature was 59° at Willow City, Bottineau County; the least was 41° at Foxholm, Ward County. The greatest daily range was 53° at Hansboro, Towner County, on the 13th.

PRECIPITATION.

The average precipitation for the State was 1.95 inches, or 0.66 inch below the normal, and 1.19 inches less than the average for July, 1923. The greatest monthly amount reported was 3.97 inches at Stanton, Mercer County; the least was 0.57 inch at McHenry, Foster County. The greatest amount recorded in any 24 consecutive hours was 2.33 inches at Willow City, Bottineau County, on the 19th. The average number of days with 0.01 inch or more of precipitation was 6.

AURORAS.

Auroras were observed at McLeod on the 23d, and at Epping on the 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record. but all complete reports are used in determining section means.

Reference letters, ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing; for example, ^{b} represents two days, etc.

†Also on other dates. ††Received too late to be included in means and summaries.

T. Precipitation is less than 0.01 inch rain or melted snow.

‡‡Post-office addresses of these stations are: Berthold Agency, Elbowoods; Energy, Underwood; Grand Forks, University; Lamoine, Tuttle; Power, Leonard, N. D.; McKinney, Tolley, N. D.; Howard, Grenora, N. D.
